INTRODUCTION.

It may be taken for granted that, from the time when Åkerblad, Young and Champollion le Jeune laid the foundation of the science of Egyptology in the first quarter of the nineteenth century down to the present day, every serious student of Egyptian texts, whether hieroglyphic, hieratic or demotic, has found it necessary to compile in one form or another his own Egyptian Dictionary. In these days when we have at our disposal the knowledge which has been acquired during the last hundred years by the unceasing toil of the above-mentioned pioneers and their immediate followers—Birch, Lepsius, Brugsch, Chabas, Goodwin, E. de Rougé and others—we are apt to underrate the difficulties which they met and overcame, as well as to forget how great is the debt which we owe to them. I therefore propose, before passing on to describe the circumstances under which the present Egyptian Hieroglyphic Dictionary has been produced, to recall briefly the labours of the "famous men" who have preceded me in the field of Egyptian lexicography, and "who were honoured in their generations, and were the glory of their times."

Labours of pioneer Egyptian lexicographers.

The Abbé J. J. Barthélemy (1716–1795) as far back as 1761 showed satisfactorily that the ovals in Egyptian inscriptions which we call "cartouches" contained royal names. Zoega (1756–1809) accepted this view, and, developing it, stated that the hieroglyphs in them were alphabetic letters.[1] Had Åkerblad (1760–1819) and S. de Sacy (1758–1838) accepted these facts, and worked to develop them, the progress of Egyptological science would have been materially hastened. They failed, however, to pay much attention to the hieroglyphic inscriptions of which copies were available, and devoted all their time and labour to the elucidation of the enchorial, or demotic, text on the Rosetta Stone, the discovery of which had roused such profound interest among the learned men of the day. Their labours in connection with this text were crowned with considerable success. To Åkerblad belongs the credit of being the first European to formulate a "Demotic Alphabet," and to give the values of its characters in Coptic letters, but neither he nor S. de Sacy seems to have suspected the existence of a hieroglyphic alphabet. Both these eminent scholars produced lists, or small vocabularies, of demotic

Åkerblad and Zoega's discoveries.

Demotic vocabularies of Åkerblad and de Sacy.

words, and added translations of them which are surprisingly correct considering the period when they were compiled. And both were able to read correctly the demotic equivalents of several Greek royal names, *e.g.*, Alexander, Ptolemy and Berenice. Their failure to apply the method by which they achieved such success to the hieroglyphic inscriptions is inexplicable. It has been suggested that their scholarly minds revolted at the absurd views, theories and statements about the Egyptian hieroglyphs made by Athanasius Kircher (1601–1680), Jablonski (1673–1757), J. de Guignes (1721–1800), Tychsen (1734–1815) and others, and the suggestion is probably correct. After the publication of his famous "Letter" to S. de Sacy,[1] Åkerblad seems to have dropped his Egyptological studies. At all events, he published nothing about them. De Sacy, though he did not consider that he had wasted the time that he had spent on the demotic text on the Rosetta Stone, refrained from further research in Egyptology, and nothing of importance was effected in the decipherment of the Egyptian hieroglyphs until Dr. Thomas Young (June 13th, 1773–May 10th, 1830) turned his attention to them.

Kircher, Jablonski, de Guignes and Tychsen.

Young's Hieroglyphic Alphabet and Vocabulary.

Thomas Young and the Rosetta Stone.

In 1814 Young began to study the inscriptions on the Rosetta Stone, and, according to his own statement, succeeded in a few months in translating both the demotic and the hieroglyphic texts. His translations, together with notes and some remarks on Åkerblad's Demotic Alphabet, were printed in *Archæologia* for 1815, under the title "Remarks on Egyptian Papyri and on the Inscription of Rosetta." With respect to the Egyptian Alphabet he says, "I had hoped to find an alphabet which would enable me to read the enchorial inscription. . . . But . . . I had gradually been compelled to abandon this expectation, and to admit the conviction that no such alphabet would ever be discovered, because it had never been in existence." During the next three or four years he made striking progress in the decipherment of both demotic and hieroglyphic characters. The results of his studies at this period were published in his article Egypt, which appeared in Part I of the fourth volume of the *Encyclopædia Britannica* in 1819. It was accompanied by five plates, containing *inter alia* a hieroglyphic vocabulary of 218 words, a

Digitized by Microsoft®

"supposed enchorial, *i.e.*, demotic alphabet," and "specimens of phrases." The VIIth Section of the letterpress contained the "Rudiments of a Hieroglyphic Vocabulary," and thus Young became the "father" of English compilers of Egyptian Vocabularies. In this article, which formed a most important and epoch-making contribution to Egyptology, Young gave a list containing a number of alphabetic Egyptian characters, to which, in most cases, he assigned correct phonetic values, *i.e.*, values which are accepted by Egyptologists at the present day. In fact, he showed that he had rightly grasped the idea of a phonetic principle in the reading of Egyptian hieroglyphs, the existence of which had been assumed and practically proved by Barthélemy and Zoega, and applied it FOR THE FIRST TIME in the decipherment of Egyptian hieroglyphs. This seems to me to be an indisputable fact, which can easily be verified by any one who will take the trouble to read Young's article, EGYPT, in the "Supplement" to the *Encyclopædia Britannica* and study his correspondence and papers which John Leitch reprinted in the third volume of the *Miscellaneous Works of the late Thomas Young, M.D., F.R.S.*, London, 1855. Those whom such evidence will not satisfy may consult the five volumes of his papers that are preserved in the British Museum (Additional MSS. 27,281–27,285). In the first volume (Add. 27,281) are all the principal documents dealing with his work on the Rosetta Stone, and in the second (Add. 27,282) will be found his copies of a series of short vocabularies of Egyptian words. Without wishing in any way to reopen the dispute as to the merits and value of Young's work in comparison with that of Champollion, it may be pointed out that scholars who were contemporaries of both and who had competent knowledge of Egyptology couple together the names of Young and Champollion, and place Young's name first. Thus Kosegarten groups Young, Champollion and Peyron[1]; Birch speaks of the "discoveries of Dr. Young and M. Champollion"[2]; and Tattam says that the sculptured monuments and papyri of Egypt have long "engaged the attention of the Learned, who have in vain endeavoured to decipher them, till our indefatigable and erudite countryman, Dr. Young, and, after him, M. Champollion, undertook the task."[3]

The great value and importance of Young's application of the phonetic principle to Egyptian hieroglyphs has been summed up with characteristic French terseness and accuracy by Chabas, the distinguished Egyptologist, who wrote, "Cette idée fut, dans la réalité, le FIAT LUX de la science."[1]

Curiously enough Young did not follow up his discovery by a continued application of his phonetic principle to Egyptian inscriptions other than those on the Rosetta Stone, but seems to have been content to leave its further application and development to Champollion le Jeune.[2] And for some reason he made no attempt to add to the Egyptian Vocabulary containing 218 words which he published in his article EGYPT in the *Encyclopædia Britannica*, or if he did, his additions were never printed. On the other hand,

Young's Demotic Dictionary.

he devoted himself to the preparation of a Demotic Dictionary and this work occupied the last ten years of his life. The "Advertisement" is of considerable interest, for it shows that it was only his inability to decide upon the system of arrangement that ought to be employed in an Egyptian Dictionary, that prevented him from publishing the work during his lifetime. His difficulty is described by him thus:

"From the mixed nature of the characters employed in the written language or rather languages of the Egyptians, it is difficult to determine what would be the best arrangement for a dictionary, even if they were all perfectly clear in their forms, and perfectly well understood: at present, however, so many of them remain unknown, and those which are better known assume so diversified an appearance, that the original difficulty is greatly increased. Every methodical arrangement, however arbitrary,

Alphabetic arrangement of the Dictionary.

has the advantage of bringing together such words as nearly resemble each other: and it appears most likely to be subservient to the purposes of future investigation, to employ an imitation of an alphabetical order, or an artificial alphabet, founded upon the resemblance of the characters to those of which the phonetic value was clearly and correctly determined by the late Mr. Åkerblad; and to arrange the words that are to be interpreted according to their places in this artificial order; choosing, however, in each instance, not always the first character that enters into the composition of the word, but that which appears to be the most radical, or the most essential in its signification, or

sometimes that which is merely the most readily ascertained or distinguished."[1]

Champollion's Hieroglyphic Alphabet.

Now although Young was the first to apply the phonetic, or alphabetic, principle to Egyptian hieroglyphs, it is quite clear from the above that he failed to see its value in arranging Egyptian words in a dictionary. Speaking of Champollion's alphabet, which was in reality his own with modifications and considerable additions, he says: "His SYSTEM of phonetic characters may often be of use in assisting the memory, but it can only be applied with confidence to particular cases when supported in each case by the same kind of evidence that had been employed before its invention. His communications have furnished many valuable additions to this work, all of which have been acknowledged in their proper places." So then rejecting his own system of phonetic, *i.e.* alphabetic, characters, and Champollion's development of it, he drew up his "Rudiments of the Egyptian Dictionary in the ancient Enchorial Character," intending the work to appear as an Appendix to the "Coptic Grammar," which Henry Tattam was then writing. Whilst the printing of the "Rudiments" was in progress he fell ill, but his interest in the work was so great that in spite of his illness he continued to

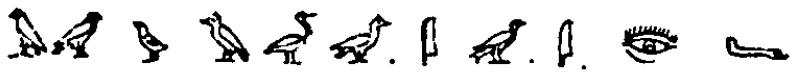

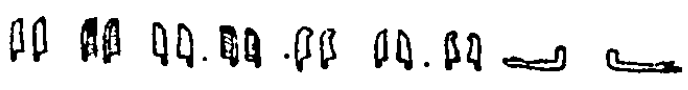

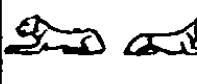

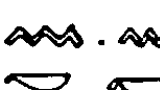

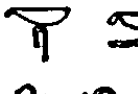

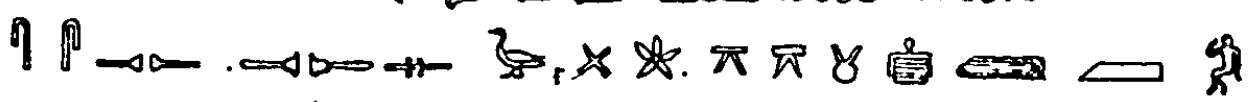

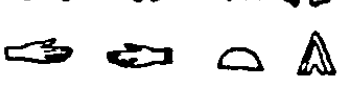

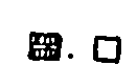

Kosegarten's testimony.

prepare its pages for the lithographer and to correct the proofs. When he had passed for press six sheets, *i.e.* 96 pages, death overtook him, and Tattam corrected the last 14 pages (pp. 97–110) of proof, saw them through the press, and compiled an Index to the work, which appeared with Tattam's "Coptic Grammar" in

[1] Writing to M. Arago on July 4th, 1828, Young says, "Now of the nine letters which I insist that I had discovered, M. Champollion himself allows me five, and I maintain that a single one would have been sufficient for all that I wished to prove; the method by which that one was obtained being allowed to be correct, and to be capable of further application. The true foundation of the analysis of the Egyptian system, I insist, is the great fact of the original identity of the enchorial with the sacred characters, which I discovered and printed in 1816 [in the *Museum Criticum* No. VI, pp. 155–204], and which M. Champollion probably rediscovered, and certainly republished in 1821; besides the reading of the name of Ptolemy, which I had completely ascertained and published in 1814, and the name of Cleopatra, which Mr. Bankes had afterwards discovered by means of the information that I had sent him out to Egypt, and which he asserts that he communicated indirectly to M. Champollion [see H. Salt, *Essay on Dr. Young's and M. Champollion's Phonetic System of Hieroglyphics*, London, 1825, p. 7]; and whatever deficiencies there might have been in my original alphabet, supposing it to have contained but one letter correctly determined, they would and must have been gradually supplied by a continued application of the same method to other monuments which have been progressively discovered and made public since the date of my first paper." Leitch, Miscellaneous Works of the late Thomas Young, M.D., F.R.S., Vol. III, p. 464 ff.

1830.[1] The "Rudiments," to paraphrase Kosegarten's words, contains a valuable and well-arranged collection of all the most important groups of enchorial characters hitherto deciphered. These Young selected from enchorial texts which had been published by himself, and by Champollion and Kosegarten, and from letters which he had received from Champollion describing the contents of unpublished papyri at Paris.[2]

Progress of Egyptology retarded by the death of Young and Champollion.

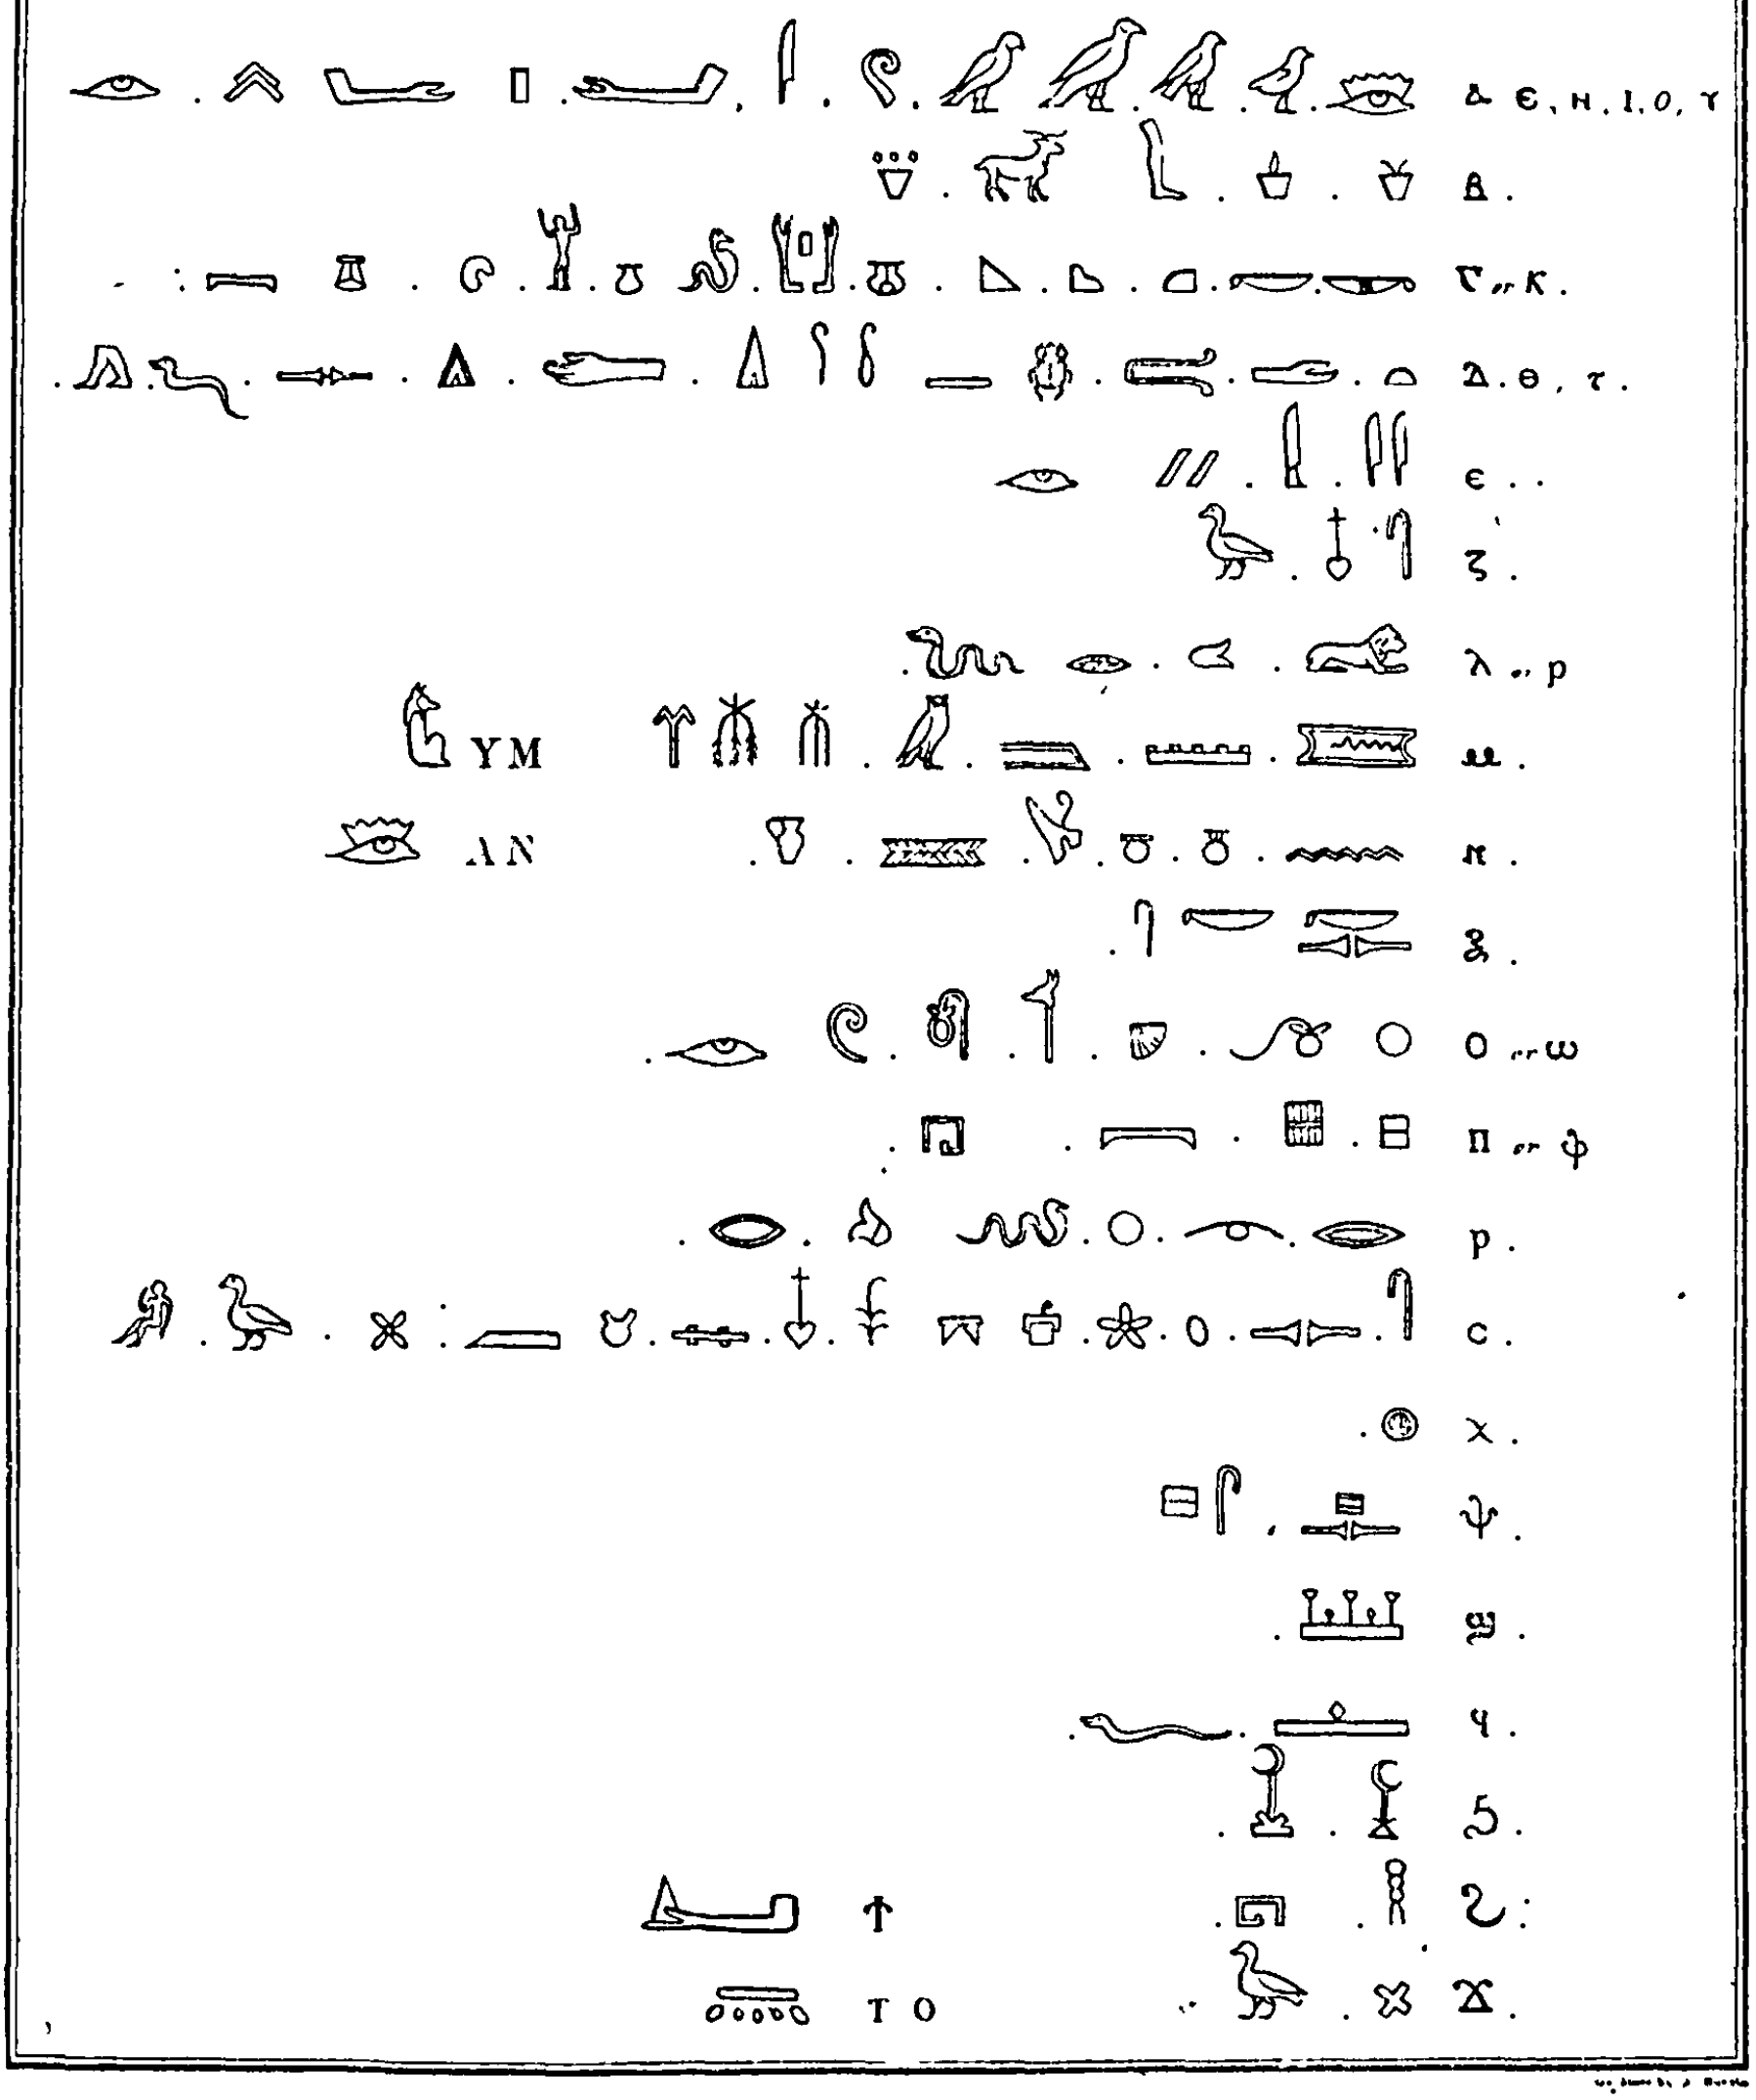

The progress of Egyptology suffered a severe set-back by the death of Young on May 10th, 1830, and by the death of Champollion on March 4th, 1832, and there was no scholar sufficiently advanced in the science to continue their work. With the exception of books and papers of a polemical character, some authors championing Young's system of phonetics, and others loudly proclaiming the superior merits of that of Champollion, and others advocating the extraordinary views of Spohn and Seyffarth (1796–1885), no important work on Egyptological decipherment appeared for several years. Soon after the death of Champollion a rumour circulated freely among the learned of Europe to the effect that the great Frenchman had left in manuscript, almost complete, many works which he was preparing for press when death overtook him, and that these were to appear shortly under the editorship of his brother, Champollion-Figeac (1778–1867). It was widely known that Champollion had been engaged for

[1] In his Observations on the Hieroglyphic and Enchorial Alphabets (*Coptic Grammar*, p. ix ff.) Tattam describes briefly and accurately the various steps in the early history of Egyptian decipherment. He shows that Young was the first to read correctly the names of Ptolemy and Berenice, that Bankes, with the help of Young, discovered the name of Cleopatra, and says that the system of letters thus discovered was "taken up, and extended, by M. Champollion, and afterwards by Mr. Salt, our late Consul-General in Egypt." He then gives the Hieroglyphic Alphabet as constructed from the researches of Young, Bankes, Champollion and Salt.

[2] Das Werk (Nro. 2), mit welchem der treffliche Young seine literarische Laufbahn und zugleich sein Leben beschlossen hat, enthält eine schätzbare, wohlgeordnete Sammlung aller wichtigsten bisher erklärten enchorischen Schriftgruppen. Er hat diese Sammlung aus den von ihm selbst, von Champollion, und von mir bekannt gemachten enchorischen Texten ausgewählt, aber auch briefliche Mittheilungen Champollion's aus noch nicht herausgegebenen Pariser Papyrusrollen benutzt. Er leitete den Druck und die Correktur dieser Schrift, welche ihm sehr am Herzen lag, und die gleichsam sein Vermächtniss über die Aegyptischen Untersuchungen liefert, noch auf seinem letzten Krankenbette, so schwer ihm auch zuletzt das Schreiben schon ward. Als er bis zur 96sten Seite mit der Correktur gelangt war, ereilte ihn der Tod; die Correktur der letzten Seiten, und die *Indices* besorgte daher Hy. Tattam. Champollion's manuscripts.

many years in compiling a Hieroglyphic Dictionary; that he had been assisted by his friend, Salvador Cherubini (1760–1842); that Charles Lenormant (1802–1859) had helped him in transcribing the slips; and that Ippolito Rosellini (1800–1843?) had made a copy of this Dictionary before Champollion set out on his last journey to Egypt. But when year after year passed and Champollion-Figeac failed to issue any of his brother's works, many scholars came to the conclusion that the manuscripts did not exist.

Richard Lepsius and Samuel Birch.

Meanwhile two young men, C. R. Lepsius (1810–1884) and Samuel Birch (1813–1885), had turned their attention to the study of Egyptian hieroglyphs, and succeeded in completing Champollion's system of decipherment and establishing it. Lepsius first studied in Berlin under Bopp (1791–1867), and having received his doctor's degree in philosophy in 1833, departed to Paris, where he won the Volney prize in 1834. In 1835 he published the two Dissertations[1] which established his reputation as a comparative philologist. He went to Rome, where he became an intimate friend of Ippolito Rosellini, the Egyptologist and friend and travelling companion of Champollion. Here he wrote and published in the "Annali dell' Instituto Archeologico di Roma" (Vol. IX, 1837) his famous "Lettre à M. le Professeur Rosellini sur l'Alphabet Hiéroglyphique." In this letter, which created widespread interest, he succeeded in removing many of the defects of Champollion's development of Young's system of phonetics, and treated the whole question of Egyptian decipherment in such a masterly manner that all adverse criticism of a serious character was silenced once and for all. It is unnecessary to refer here to the great works to the publication of which he devoted the remaining forty-eight years of his life, for they do not concern the question under discussion.

Lepsius completes Champollion's system of decipherment.

The Phonetic Alphabet of Lepsius.

Whilst Lepsius was perfecting Champollion's system, Birch was studying the whole question of Egyptian decipherment from an entirely different point of view, namely, that of a Chinese scholar. It will be remembered that so far back as 1764 Joseph

Theories of de Guignes the Sinologist and Palin.

de Guignes (1721–1800), an eminent Sinologist, tried to prove that the epistolographic and symbolic characters of the Egyptians were to be found in the Chinese characters, and that the Chinese nation was nothing but an Egyptian colony. Following in his steps, M. le Comte de Palin (or Pahlin) held that the Chinese and Egyptian characters were identical in origin and meaning;[1] he believed that if either the ancient forms of Chinese characters, or those which their values indicate, were given to them, true hieroglyphs similar to those that exist on the Rosetta Stone would very often be found. And he thought that if the Psalms of David were translated into Chinese, and they were then written in the ancient characters of that language, the inscriptions in Egyptian papyri would be reproduced.[2] Now whatever may have been the opinions held by Young and Champollion about the relationship of the Chinese language to the ancient Egyptian language, or the similarity of the principles on which Chinese and Egyptian writing had been developed, these scholars could neither affirm nor deny effectively the statements of de Guignes and de Palin, for both of them were ignorant of the Chinese language. With Birch the case was very different, for he studied Chinese under a competent master when still at the Merchant Taylors' School, with the direct object of obtaining an appointment in the Consular Service in China. The friend of the family who had promised to obtain this appointment for him died unexpectedly in 1831, with the result that Birch remained in England. He continued his Chinese studies, and began to read the works of Young and Champollion, thinking that his knowledge of Chinese would enable him to read the Egyptian texts easily. In 1834 he became an assistant in the Public Record Office, and worked in the Tower until January, 1836, when he entered the service of the Trustees of the British Museum. There he was able to make use of his knowledge of Chinese and Egyptian, and his first official task was to arrange and describe the Chinese coins.[3] When this work was completed he was directed to describe

Birch's Chinese studies.

the Collections of Egyptian monuments and papyri for the official Guide to the British Museum, and his account of them was published in the "Synopsis" for 1838. Long before he entered the Museum he conceived the idea of compiling a Hieroglyphic Dictionary, and began to write down, each on a separate slip of paper, the hieroglyphic words which he found in the texts published by James Burton,[1] Gardner Wilkinson,[2] Champollion,[3] Rosellini[4] and Salvolini.[5]

Birch's idea of a Hieroglyphic Dictionary.

Birch's "Sketch of a Hieroglyphical Dictionary."

This work of word-collecting had been somewhat interrupted by his duties in the Public Record Office in 1834–5, but soon after he entered the Museum he took it up with redoubled zeal, and he copied every hieroglyphic text and transcribed every hieratic papyrus which the Museum possessed. In 1837, the year in which Lepsius published his famous Letter to Rosellini, Birch revised his slips carefully, and decided to attempt to publish a "Hieroglyphical Dictionary." In those days no fount of hieroglyphic type existed, and lithography was expensive, and publishers were not eager to spend their money on a dictionary of a language of which scarcely a dozen people in the whole world had any real knowledge. At length Messrs. William Allen & Co., of Leadenhall Street, London, were induced to consider the publication of a hieroglyphic dictionary, but they decided to issue first of all a few specimen pages, with a short Preface by Birch, with the view of finding out how far the work would be supported by the learned and the general public. Thereupon Birch prepared for the lithographer twelve small quarto pages containing ninety-three words, and having written a Preface of two pages to explain his system of arrangement of the words, they were published in the autumn of 1838 under the title of "Sketch of a Hieroglyphical Dictionary. Part I. Hieroglyphs and English. Division I. Phonetical Symbols. Vowels."

Publication of Birch's "Sketch of a Hieroglyphical Dictionary."

In his Preface Birch says that he has drawn up his work to help the student of hieroglyphs in his researches, and that he intends it to be used as a manual which "all who appreciate the value of the phonetic system may use, and by which, at one glance, may be seen the extent of the discoveries of Dr. Young and

Birch's Phonetic system.

A page of Birch's *Sketch of a Hieroglyphical Dictionary.* London, 1838.

M. Champollion, and of their application to the monuments of the Egyptians." The dictionary does not claim even comparative perfection, "but it has been judged that the publication of such a work might be of slight service to those who are desirous of possessing, in a compendious form, the results of much labour, comparison and instruction." The matter contained in the work is not entirely original, but the arrangement is, and "if not scientific, [it is] perhaps the only one by which tyros could at once find the particular group or word which they seek. It may be termed ideophonetic, as it embraces both principles of ideal and phonetic classification, and its arrangement has been borrowed from a language very cognate in its construction—the Chinese."

His ideophonetic arrangement.

The hieroglyphical and English part of the Dictionary was to be divided into two parts. Part I was to contain words "commencing with symbols, representatives of sounds, or phonetic," and Part II words "whose initial character is the equivalent of an idea, or ideographic." Part I was to be "subdivided into symbols, having the power of vowels or consonants, the vowels forming (on account of one symbol frequently having the force of many) one large class, and the consonants, according to their position in the Coptic alphabet." That is to say, Division I of Part I was to contain symbols or characters some of which Birch held to be polyphonous, and Division II symbols to which he had given consonantal values, and these were to be arranged in the order of the letters of the Coptic Alphabet. The internal classification of the characters or symbols was to be strictly ideographical, "taking the symbols in their arrangement, according to the rank they hold in natural and other sciences, as the human form, limbs, animals, inanimate objects, etc." At the end of the Dictionary Birch intended to give "all the symbols in a similar classification, and in a tabular view," and this section was to form the key to the whole work. With the view of illustrating the way in which he intended his Dictionary to be used, he says, "Suppose, for example, it were required to find the meaning of a group beginning with a human eye []—as the eye is a component part of the human body, it will be found in that division in the table, and there will be affixed to the depicted eye, v[ide Nos] 13–43." In this group of words will be found all those words in which an eye [] is the first character; and the eye generally represents a vowel. These remarks will be clear to the reader after examining the two pages from Birch's "Sketch of a Hieroglyphical Dictionary," which are reproduced on pp. xviii

and xix. The twelve-paged specimen which he published only illustrates the plan and arrangement of what he called the "Phonetic Division" of his Dictionary, and it is much to be regretted that he did not issue specimens of the other Divisions.

First application of the phonetic principle to an Egyptian Dictionary.

The above extracts from Birch's Preface and the specimen pages which are here given prove beyond all doubt that he had grasped the importance of the "phonetic principle" for lexicographical purposes, and that he was the first to apply it to the arrangement of the words of the Egyptian language. He says that he borrowed [the idea of] his "ideophonetic arrangement" from the Chinese, a statement which should be noted. My colleague, Mr. L. Giles, the Sinologist, informs me that though the Chinese had no alphabet they developed a phonetic principle. Some eighty per cent. of the characters of the language are made up of two parts, one part serving as a phonetic and giving a clue to the SOUND of the word, and the other as a "classifier," which gives a clue as to its MEANING;[1] the "classifiers"[2] are in number about 214, and the phonetic symbols between 1,600 and 1,700. In the case of Egyptian the signs which are now called "determinatives" are the equivalents of the "classifiers," and the alphabetic characters are the equivalents of the phonetic symbols in Chinese texts.

Classifiers and determinatives.

Sad to relate, Birch's "Sketch" did not meet with sufficient encouragement to induce the publisher to continue the publication of the "Hieroglyphical Dictionary," and no more parts appeared.

CHAMPOLLION'S "DICTIONNAIRE ÉGYPTIEN EN ÉCRITURE HIÉROGLYPHIQUE."

Champollion's "Dictionnaire Égyptien."

Nothing more was done in the field of Egyptian lexicography until 1841, when the "Dictionnaire Égyptien en écriture hiéroglyphique" of Champollion appeared at Paris under the careful editorship of Champollion-Figeac. In a lengthy "Préface" the editor describes the history of the Dictionary and the plan on which it is arranged, and the untoward events which delayed its publication; and from it the following summary has been made. Even before 1822, the year in which Champollion published his

Lettre à M. Dacier[1] *relative à l' Alphabet des Hiéroglyphes Phonétiques employés par les Égyptiens pour inscrire sur leurs Monuments les titres, les noms et les surnoms des souverains Grecs et Romains*, he had made one list containing all the hieroglyphic characters he had found, and another list containing all the characters the meaning of which appeared to be manifest. He wrote each character on a separate card, and afterwards tabulated them systematically. Already in 1818–19 he had made a manuscript list of hieroglyphic words entitled, *Premier essai d'un Dictionnaire des Hiéroglyphes Égyptiens*, adding the legend, *Davus sum, non Œdipus*. When later he learned to distinguish three classes of characters, figurative, symbolic and phonetic, and was able to prove that they were employed simultaneously in the texts of all periods, he began to compile an Egyptian Dictionary. He first wrote each word on a separate slip of paper, or card, and then copied each on to a separate sheet of small folio paper, ruled in five columns. Col. 1 gave the character in outline and its hieratic form, Col. 2 its name, Col. 3 its graphic character (symbolic, figurative or phonetic), Col. 4 its actual meaning or value, and Col. 5 a reference to the text in which it had that value. Thus the Dictionary existed in duplicate, in slips and in sheets, and it had assumed very large proportions before Champollion went to Egypt in 1838. At this time Rosellini, who was a great friend of Champollion long before he became his fellow traveller, was allowed to make a copy of the Dictionary, presumably for his own use. It must be this copy which he bequeathed to the Biblioteca dell' Imperiale e Reale Università of Pisa, and which is thus described in the Inventory of the bequest by Dr. Giuseppe Dei :[2] " No. 4 casette, divise in caselle contenenti il non ultimato ma molto avanzato Dizionario dei Geroglifici, eseguito in parecchie migliaia di cartelle fatte per ordine alfabetico pei caratteri *fonetici*, e metodico per i *figurativi* e ideografici simbolici."

Champollion's classification of hieroglyphic characters.

Rosellini's copy of Champollion's Egyptian Dictionary.

When Champollion went to Egypt he took with him both copies of his Dictionary, and while in that country he added to both very considerably ; MM. Salvador Cherubini and Lenormant wrote many slips for him, and their contributions formed part of the original manuscript. On his return from Egypt he continued his labours on the Dictionary and added largely to it.

[1] Born 1742, died 1833. He was the Permanent Secretary to the Académie des Inscriptions et Belles Lettres, and was well known as a classic and historian.

Champollion died on March 4th, 1832, and when his brother wished to take steps to publish the Dictionary he found that as a result of "funestes conseils des plus funestes passions," one half of each copy of the *Dictionnaire* had been carried off, but by whom Champollion-Figeac does not say in his edition of the *Dictionnaire*. All that he says on the subject there is that in spite of all opposition he succeeded in 1840 in regaining possession of 329 folios of the copy of the *Dictionnaire*, which was written out fairly on sheets of paper, and a large number of the slips belonging to the copy, which was kept purposely in slip form. And that having these in his hands he felt justified in thinking that he was in possession of both manuscript copies of the *Dictionnaire* in a nearly complete state. In a footnote he refers to a pamphlet in which he tell us how he regained possession of the parts of the two manuscript copies of the *Dictionnaire* which had disappeared, and as the pamphlet is now very rare, and his story is not generally known, I summarise it here.

Disapearance of portions of Champollion's MSS.

Their recovery by Champollion-Figeac in 1840.

Champollion-Figeac's pamphlet is entitled, *Notice sur les Manuscrits Autographes de Champollion le Jeune perdus en l'Année* 1832, *et retrouvés en* 1840. Paris, March, 1842. He says that when in April, 1832, he set to work to arrange his brother's literary effects with the view of offering the MSS. to the Government, he found at once that several of the most important of them were missing. He devoted himself to the task of making enquiries for them among his brother's friends, but they could give him no information about them, and the only result of his labour was to make widely known the fact that they were lost. The savants of the day, remembering how freely Champollion lent his writings to his intimate friends, hoped that they were not lost but only mislaid by some friend who had forgotten all about them. A year passed, and nothing was heard of the lost manuscripts. Meanwhile Champollion-Figeac began to suspect that one of his brother's friends, a man who was peculiarly indebted to him, had them in his possession. This friend was a young Italian called Salvolini, a native of Faenza, who came to Paris to study Egyptology in 1831, and who became a close friend of Champollion and his family. Champollion-Figeac's suspicions were aroused by the fact that a few months after the death of his brother, Salvolini sent him a prospectus of a work on the inscriptions on the Rosetta Stone, the Book of the Dead, etc., which he intended to publish in three volumes quarto. That a young man, 22 years of age,

Suspicion falls on Salvolini.

Digitized by Microsoft®

who had only studied Egyptian for a year could produce an elaborate work on difficult Egyptian texts in three volumes quarto was absurd on the face of it, and as Champollion-Figeac knew that his brother had written monographs on the very texts that were mentioned in the prospectus, he came to the conclusion that Salvolini had stolen the missing manuscripts. This was quite possible, for Salvolini had had free access to the study of Champollion, and was constantly in his house during his last illness. In August, 1833, at a public meeting of the Académie des Inscriptions Silvestre de Sacy solemnly called upon the man or men who had the missing manuscripts in their possession to restore them to their author's family, and Salvolini had the audacity to join him in mourning the loss of them, and with tears in his eyes he implored the man who had them to give them up. And at that moment he was announcing the publication of them under his own name! Still nothing was heard of the missing manuscripts. In February, 1838, Salvolini died, aged 28. Champollion-Figeac tried to find out what papers he had left behind, and was told that they had been claimed by a foreign messenger, and that they had been sent beyond the Alps. As a matter of fact, they had never left Paris, where they remained forgotten in some rooms. When Salvolini died his relatives commissioned an artist, Luigi Verardi, to wind up his affairs, and when this gentleman examined the effects the manuscripts on which was inscribed the name of François Salvolini seemed to be the most valuable parts of them. Verardi really believed that the manuscripts were the work of Salvolini, and wishing to do the best he could for his friend's family, tried to sell them, but no one would buy them. Finally, not knowing what else to do with the manuscripts, he wished to show them to Charles Lenormant, the friend and fellow traveller of Champollion, and to take his advice on the subject. At first Lenormant refused to look at them, but after a time, to oblige his friend Verardi, he agreed to do so. As soon as Lenormant began to turn over the leaves of the bundles of manuscripts which bore on them Salvolini's name, he recognised at once two of the works of Champollion, the loss of which had been publicly deplored by Silvestre de Sacy at the meeting of the Académie mentioned above. There was no longer any doubt about the matter. Salvolini had stolen the manuscripts of his friend and master, and as he made no response to de Sacy's appeal for their restoration, it was quite clear that he had intended to keep them. With the manuscripts of Champollion were several

papers that were the work of Salvolini, but when Lenormant showed Verardi a whole volume which Champollion had written in French with his own hand, and pointed out to him the title, "Storia d'Egitto par F. Salvolini," which Salvolini had written on the title sheet, Verardi was convinced that he had been deceived by his dead friend. He realised quickly that Champollion's manuscripts must be given up to his heirs, and showed himself amenable to Lenormant's representations. Lenormant agreed to give him 600 francs for the documents, and with this sum Salvolini's family had to be content. Lenormant took possession of all Champollion's stolen manuscripts, and handed them over to the Government, who, by a special resolution passed on the 24th of April, 1833, had ordered their acqusition in the interests of science. Salvolini published the first volume of the "Analyse Grammaticale" in 1836; the second and third volumes did not appear. His papers fill five volumes. See Catalogue des Papyrus Égyptiens de la Bibliothèque Nationale, Paris, No. 331, MS. 4to. See also the two letters to M. C. Gazzera in *Des principales expressions qui servent à la Notation des Dates sur les Monuments de l'Ancienne Égypte.* Paris, 1832–3. 8vo.

Lenormant purchases the MSS. from Verardi.

Champollion's manuscripts, however, needed a great deal of alteration and arrangement before they could be printed. And their editor describes in detail how he was himself obliged to make a copy of the Dictionary in which he incorporated the contents of both the slips and the folios, as well as very many important particulars from his brother's *Grammaire Égyptienne.* Having written out all his material, he had to decide how to arrange the words. This was no easy matter, and finally he adopted the system which was foreshadowed in his brother's "Mémoire sur l'Écriture Hiératique," and was printed in 1821. At that time Champollion was endeavouring to classify and arrange the Egyptian hieroglyphs, and found great difficulty in doing so. He believed that the ancient Egyptians must have had some system of arrangement for them, though he had no support for this view, and no evidence on the subject was forthcoming from native sources, and none from the works of classical writers. Finally he adopted a "methodical, or so to say, natural classification," that is, he grouped into sections the figures of men, human members, animals, birds, fish, reptiles, plants, etc. This method was a modification of the system of arrangement of words in their Vocabularies by the Copts, for Champollion argued that if the Copts, who are racially the descendants of the ancient

Hieroglyphic and Hieratic signs compared by Champollion. From *Précis du Système Hiéroglyphique*. Paris, 1824.

Egyptians, and whose language is substantially the same as that of the ancient Egyptians, arranged their Vocabularies in this way, they must be reproducing a system that had been in use among their remote ancestors thousands of years earlier. Champollion-Figeac accepted his brother's arguments, and arranged the words of the Dictionary according to the order of the Sign-list composed by him, and printed in his earlier work.

The Coptic "Scala."

The following paragraph will explain the general system of arranging words in a Coptic Vocabulary, the common native names for which are ⲗⲁϩⲕⲓ or ⲗⲁⲕⲓ, and ⲥⲗⲟⲥ or ⲥⲗⲟⲟⲥⲉ, *i.e.* Scala, "steps" or "stair." A typical example of such a Scala is given in the bilingual Coptic and Arabic MS. in Brit. Mus. Orient 1325, fol. 90 ff,[1] where we find the Scala Magna (Copt. ⲧⲙⲯⲧ ⲙ̅ ⲗⲁⲕⲓ, Arab. سُلَّم الْكَبِير) of Ibn Kab'r.[2] It is divided into ten Gates or Doors (ⲣⲟ = ⲫ), and each gate contains several Chapters (ⲕⲉⲫⲁⲗⲉⲟⲛ).

The Ten Gates of the "Scala."

The First Gate (fol. 90A) contains four Chapters. The First Chapter gives the names of the Creator, ⲛⲓⲣⲁⲛ ⲛ̅ⲧⲉ ⲡⲣⲉϥⲥⲱⲛⲧ, the names of the Son from the Holy Scriptures, and the names of the Holy Spirit. The Second Chapter gives the names of the world which is above, ⲡⲕⲟⲥⲙⲟⲥ ⲉⲧⲥⲁ ⲡϣⲱⲓ, and of its orders and ranks, ⲛⲉⲙ ⲛⲉϥⲧⲁⲝⲓⲥ ⲛⲉⲙ ⲛⲉϥⲧⲁⲩⲙⲁ. The Third Chapter gives the names of the Firmament, and its towers, and its stars, ⲡⲓⲥⲧⲉⲣⲁⲱⲙⲁ ⲛⲉⲙ ⲛⲉϥⲡⲩⲣⲅⲟⲥ ⲛⲉⲙ ⲛⲉϥⲟⲱⲃϣ, and towers of the second station and the stations of the moon, ⲡⲓⲡⲩⲣⲅⲟⲥ ⲙ̅ⲙⲁⲁϩⲓ ⲃ̅ ⲙⲓⲙⲟⲛⲏ ⲛ̅ⲧⲉ ⲧⲙⲉⲧⲓⲟϩ. The Fourth Chapter deals with the world as it exists and its physical constitution and its Elements, ⲡⲓⲕⲟⲥⲙⲟⲥ ⲉⲧ ϣⲟⲡ ⲛⲉⲙ ⲛⲉϥⲫⲩⲥⲓⲥ ⲛⲉⲙ ⲛⲉϥⲥⲧⲟⲓⲭⲓⲟⲛ.. The Second Gate (fol. 97A) contains seven Chapters, and deals with men, their worship, their qualities, occupations, grades, clothing, etc. Then follows a series of Chapters giving the names of beasts and animals (fol. 118A), birds (fol. 119A), the monsters and fish of the sea (fol. 120A), trees and fruits (fol. 121A), scents and unguents (fol. 122A), seeds and grain (fol. 125A), precious metals, stones, etc. (fol. 127A), colours, names of countries (fol. 128A), rivers (130A), churches (Gate VII, fol. 130B), persons mentioned in Holy Scripture (fol. 132A), foreign words in Holy Scripture (Gate IX, fol. 135B), miscellaneous series of words (Gate X, fol. 138B).

Summary of their contents.

Champollion-Figeac accepts the arrangement of the "Scala."

Such was the arrangement of words in the model which Champollion-Figeac took as a guide for the arrangement of words in his brother's Egyptian Dictionary, and he asks the question "L'expérience ou le raisonnement indiquaient ils une autre méthode?" Experience, he says, suggests a single example only, namely the Chinese, but having described at some length the differences that exist between the Chinese and Egyptian languages, he decides that even if analogies and a similitude between these two languages did exist originally they do so no longer. The Chinese Dictionary must not be employed as the model for a Hieroglyphic Dictionary, only the Coptic *Scala* is any use for this purpose. Champollion-Figeac then goes on to mention that another system has been proposed and even tried, namely that advocated by Samuel Birch in his "Sketch of a Hieroglyphical Dictionary." Having examined the Preface to this work he says, "Though the specimen, which I owe to the courtesy of Mr. Birch, is brief, it seems to me to be sufficient to make clear the defect in the general plan adopted by this scholar. The phonetic characters are divided into vowel characters and consonantal characters; the symbolic or ideographic characters are separated and form a section by themselves. He who would search for the value of one of the eight hundred Egyptian characters would then be obliged to know first of all whether it is a symbolic or phonetic character, and when the character forms one of this second series, to know also whether its value is that of a vowel or a consonant, that is to say, to know beforehand all that he seeks to learn in the Dictionary. The general table proposed by Mr. Birch will undoubtedly facilitate his searchings, but would it not be more advantageous to spare students (1) the labour of searching; (2) the trouble of finding the *human eye* belonging to the vowel I, the *arms* belonging to the vowel A, the *leg* belonging to the consonant B, the *two arms raised* belonging to the consonant K, the *hand* belonging to the consonant T, the *mouth* belonging to the consonant R, the *head full-faced* belonging to the aspirated consonant ḥ; and (3) the inextricable confusion of forms and expressions that results from the mixing-up of the members of the human body with quadrupeds, and fish and flowers? On the other hand, would not all the analogous characters which the natural or rational system would write in the same series, or the members of the human body, or animals, or vegetables, placed together and each species grouped in a single chapter, characterise more clearly a system which is truly natural and, in consequence,

He rejects the Chinese arrangement of characters.

He pleads for Birch's suffrage for his brother's system.

preferable to any other? This is the actual system which was adopted by the author of our *Dictionnaire Hiéroglyphique*, and it is necessary to hope that Mr. Birch will not deny to it his suffrage.[1] . . . In the general order of the divisions [of the *Dictionnaire*] the characters are placed according to the order of merit of the object which they represent; heaven before the stars which appear therein; man before all other animated creatures; the products of the divine creation before the products of human invention; plants before objects of art and fantastic emblems. Finally, the whole before its parts, and these even in a certain order of relative pre-eminence, which is regulated by the customs or opinions of the world. . . . Each hiero-

Champollion-Figeac describes his "natural and rational" system.

glyphic character is followed by the groups of which it is the primitive character, the key-character, and in the arrangement of these groups, the order of priority adopted for the general classification of the characters has been followed. . . . Moreover, this order for the second character is followed equally for the third, the fourth, etc., just as is done for the second, third and fourth letter of the words of our dictionaries arranged in the order of the alphabet."[2]

However "natural" and "rational" this system may have been from Champollion's point of view, there is no doubt that the beginner and student with only a limited knowledge of hieroglyphs would find it very difficult to get from his Dictionary much help in reading even an ordinary historical inscription, or a formula from the Book of the Dead. This will be apparent to the reader if he will examine the extract from it which is printed on pp. xxviii, xxix, even after making due allowance for the imperfect knowledge of the interpretation of hieroglyphs which Egyp-

The "natural and rational" system of arrangement of hieroglyphs rejected by contemporary Egyptologists.

tologists possessed in 1832. At all events Champollion's system was not adopted by the Egyptologists of the day, though all admitted his *Dictionnaire* to be a fine monument of research and learning.

In the Preface to his "Sketch of a Hieroglyphical Dictionary," Birch stated that he did not intend to proceed with the publication of his work until the second part of Champollion's *Grammaire Égyptienne* had appeared. This decision is easily understood and it is only natural that he should wait to see what further details of Champollion's incomplete works might be contained in manuscripts which Champollion-Figeac was publishing as fast as possible. The last fascicule of the *Grammaire Égyptienne* appeared in 1841, and Champollion's *Dictionnaire Égyptien* in

1842, and Birch and his great contemporary Lepsius spent some years in digesting these works. Birch told me more than forty years ago that the more he studied the monuments, and the more he copied hieroglyphic and hieratic papyri, the more he became convinced that Champollion's "natural and rational" system of arranging words in the Egyptian Dictionary was hopelessly unpractical. He had profound respect for Champollion's learning and ability, but he could not give his "suffrage" to the *Dictionnaire* as Champollion-Figeac hoped he would. In the end he decided once and for all that in continuing his lexicographical labours he must adopt a purely phonetic, *i.e.*, alphabetic arrangement, even though it implied the rejection of the "ideophonetic" arrangement which he himself had proposed in 1838. Moreover, his own study of the Sallier and Anastasi Papyri, which the British Museum acquired about that time, convinced him of the fact that the time for the publication of a really useful Egyptian Dictionary had not yet come. Material out of which a dictionary might be compiled existed in abundance, but it was unpublished. What was most wanted was good copies of texts on which scholars in every country could work, and the Trustees of the British Museum rendered Egyptology great service when they published the wonderfully good copies of the Sallier and Anastasi Papyri, made by Mr. Netherclift under the superintendence of Birch.[1] Dr. Leemans urged the Government of the Netherlands to publish the monuments and papyri at Leyden, and they wisely did so,[2] and Lepsius put an end to vague talk about the Book of the Dead when he published a facsimile of the famous Turin Codex, containing the Saïte Recension of this important work. Further, the last-named scholar, having persuaded the Prussian Government of the importance of collecting the fast-perishing inscriptions in Egypt, was despatched to that country in 1842 to carry out the work, and so was able to place at the disposal of Egyptologists throughout the world his great *Corpus* of Egyptian texts and papyri, Nubian inscriptions, etc., called the "Denkmäler."[3]

He finally adopts a phonetic alphabetic arrangement and rejects his own ideophonetic system.

Birch, Leemans and Lepsius begin to publish the Egyptian texts.

Birch's Dictionary of Hieroglyphics.

Birch's decision to adopt a purely alphabetic arrangement in his Egyptian Dictionary was induced largely by the results of the careful study of the alphabetic hieroglyphs which Edward Hincks carried out after the appearance of Champollion's *Dictionnaire Égyptien*. Whilst making this study he was in frequent communication with Birch, who was greatly impressed with his clearness of thought and the ease with which he recognised the difficulties of the problem, and found their true solution. Birch was at that time engaged in preparing a list of Egyptian characters[1] for the first volume of Bunsen's "Aegyptens Stelle," and the matter for the last three Sections in it,[2] and, judging from Bunsen's remark,[3] Birch's official duties left him very little leisure for the compilation of his Dictionary. Hincks published the results of his investigation in 1847,[4] and in that year Birch, as he himself told me, began to write the slips for his Egyptian Dictionary, and to arrange them alphabetically in boxes. The work of publishing and reading new texts occupied him for several years, but at length the large mass of material which he had collected justified him in considering the publication of his work. Thereupon arose the two difficult questions: Was the Dictionary to be printed or lithographed? Who would undertake the expense of publication? To print it was impossible, for there was no fount of Egyptian type in existence. It might, of course, be lithographed, but that pre-supposed the writing out of the whole Dictionary on transfer paper by Birch himself, a work that would require a vast amount of time and labour. As no immediate solution of the difficulty seemed possible, Birch continued to write slips and revise his manuscript.

Hincks's researches.

Birch begins to write his Dictionary of Hieroglyphics.

Typographical difficulties.

Meanwhile Bunsen had published further additions to his voluminous "Historical Investigation into Egypt's Place in

[1] This list contained about 830 characters, and was printed on eight plates in the first volume of Bunsen's work (Hamburg and Gotha, 1845. 8vo).

[2] Bunsen thanks his friends for their help (Vorrede, p. xxvi, Vol. I) "und Samuel Birch am Britischen Museum (in welchem ein grosser Theil der drei letzten Abschnitte des ersten Buches geschrieben ist), sagen wir Dank mit freudigen Wünschen."

[3] Ein vollständiges Wörterbuch des Hieroglyphenschatzes, mit allen Mannigfaltigkeiten der Darstellung und mit Anführung des Textes der entscheidenden Stellen, darf die gelehrte Welt von Herr Birch erwarten, sobald seine amtlichen Beschäftigungen ihm die Musse dazu gewähren (Vol. I, p. 646).

[4] See his paper, *An attempt to ascertain the number, names and powers of the letters of the Hieroglyphic ancient Egyptian Alphabet, grounded on the establishment of a new principle in the use of phonetic characters* in the *Transactions of the Royal Irish Academy*. Dublin, 1847. 4to.

An English edition of Bunsen's "Aegyptens Stelle" called for.

Universal History," which excited general interest not only on the Continent, but in England, and an English edition was called for. Negotiations with Messrs. Longman were entered into, presumably by Bunsen himself, and the outcome of them was that, at a very heavy cost, they undertook to cast a fount of hieroglyphic type in order to print Birch's Egyptian Sign-List, Grammar, Dictionary and Chrestomathy as essential portions of the English edition of the first and fifth volumes of Bunsen's work.[1] Thus a firm of publishers undertook to perform, at their own private expense, a task which abroad would have been heavily subsidised by the Government. The designs for the bold, handsome type (see a specimen page of the Dictionary on p. xxxvii) were drawn by Mr. Joseph Bonomi, the matrices were cut by Mr. L. Martin, and the casting was carried out by Mr. Branston, all under Birch's direction. When the printing of Birch's Egyptian Dictionary began I have been unable to find out, but I remember his saying that it took nearly three years to pass the sheets through the press, even after the greater number of the types were cast and ready for use. The English translation of the fifth volume of "Egypt's Place in Universal History" appeared in the first half of the year 1867, and the official date stamp of the copy in the British Museum reads "11 Ju[ly] 67." It was seen through the press by Birch after the death of Bunsen and Cottrell, the English translator, and in the Preface Birch says that "a few words are required to indicate the additional labours which have been bestowed upon it, and the introduction of certain portions which are not to be found in the German Edition." The first 122 pages were revised by Bunsen, who was enabled to use the English translation of the Turin Codex of the Book of the Dead which Birch had made and placed in his hands. The Hieroglyphic Grammar, Chrestomathy and Dictionary, which according to the original plan of the work

A fount of hieroglyphic type cast in London.

Birch edits the fifth volume of Bunsen's work.

[1] Writing at Highwood on September 27th, 1847, Bunsen says in the Postscript to the first English edition of Vol. I, "This English edition owes many valuable remarks and additions to my learned friend, Mr. Samuel Birch, particularly in the grammatical, lexicographic, and mythological part. That I have been able to make out of the collection of Egyptian roots, printed in the German edition, a complete hieroglyphical dictionary, is owing to him. To him also belong the references to the monumental evidence for the signification of an Egyptian word, wherever the proof exhibited in Champollion's dictionary or grammar is not clear or satisfactory. Without any addition to the bulk of the volume, and without any incumbrance to the text, the work may now be said to contain the only complete Egyptian grammar and dictionary, as well as the only existing collection and interpretation of all the hieroglyphical signs; in short, all that a general scholar wants to make himself master of the hieroglyphic system by studying the monuments."

Digitized by Microsoft ®

were to form parts of the fifth volume, were not completed when Bunsen died on November 28th, 1860. The unfinished translation of the comparative vocabularies was completed by Birch and Dr. Rieu, Assistant Keeper of Oriental Manuscripts in the British Museum, who also inserted Bunsen's additions and corrections. Birch's translation of the Book of the Dead, together with his Introduction, fills 209 pages (pp. 125–333), the Egyptian Dictionary fills 250 pages (pp. 337–586), and the Hieroglyphic Grammar and Chrestomathy fill 153 pages (pp. 589–741). Thus the original matter supplied by him to the fifth volume fills 612 pages, or nearly three-quarters of the whole volume. The number of entries on a page of the Egyptian Dictionary averages eighteen, and the total number of entries is therefore about 4,500.

The comparative vocabularies completed by Birch and Rieu.

Birch's contributions to the fifth volume.

"The Dictionary," Birch says in his Preface, "is phonetic in its arrangement, the words being placed under the phonetic value[s] of the signs at the time of compilation. It is important to remember this, as Egyptologists give a different power to a few signs, or regard others as polyphone[s]. The ideographic and determinative hieroglyphics, having been already given in the first volume,[1] have not been repeated in this, and the student must seek them in their appropriate places. It is also to be borne in mind that the meaning of all Egyptian words has not yet been determined, and that the researches of Egyptologists continue to enrich the number of interpreted words. A reference to the place where it is found is given with each word, but it was not possible, without exceeding the limits of this work, to give in every instance the name of the scholar who discovered its meaning [here follows

[1] Bunsen says ("Egypt's Place," Vol. I, p. 503), "I have, together with Mr. Birch, submitted to the test of accurate criticism all the hieroglyphical signs hitherto collected and explained, and have classified each of them in its proper place, according to that arrangement. [The general arrangement is laid down in the text.] At the same time I have requested that gentleman to add his own valuable remarks to this collection, so as to complete and correct it. . . . Through his assistance I am enabled to give, not only a more critical, but also a more complete exposition of the hieroglyphical signs, than has hitherto been embodied in previous works, all of which are very expensive, and some very rare. Where the Grammar or Dictionary of Champollion is not quoted, the signs and interpretations are supplied by Mr. Birch from other authorities or his own researches. . . . The arrangement is the natural one, proposed and adopted by Champollion, in the early stages of the study of hieroglyphics: viz., signs of astronomical or geographical objects; human forms, animals—from the quadruped down to the worm—plants, stones, instruments, etc., and signs as yet undeciphered." The List contains: A. IDEOGRAPHICS, 890 characters. B. DETERMINATIVES, 201 characters. C. PHONETICS, C. I, 153 characters; C. II, 135 characters. D. MIXED CHARACTERS, 70 characters.

Contemporary Egyptologists.

mention of Hincks, Goodwin and Le Page Renouf in England, Chabas, E. de Rougé, Devéria in France, H. Brugsch, Dümichen, Lauth, Lepsius and Pleyte in Germany, as being the men to whom the advance of the study of Egyptology is principally due]. The advantage of [Messrs. Longmans'] hieroglyphic type to the present volume cannot be too highly appreciated, as it has rendered it practicable to print the Egyptian Dictionary, the Grammar, and the Chrestomathy in a form which renders the study of the hieroglyphs accessible both to the student and general enquirer. The Dictionary is the only one hitherto printed in this country, nor has any hieroglyphical dictionary appeared elsewhere, except that of Champollion, published in 1841 [read 1842], which contained only a few of the principal words. Its phonetic arrangement will, it is hoped, render it particularly easy of consultation. It has been a great labour to compile and print it, and the execution of it has been a task of many years. Other Egyptologists, indeed, have attached vocabularies to their labours on particular inscriptions, but no dictionary on a large scale has as yet been attempted, although the absolute want of one has been long felt." This Preface is dated April 13th, 1867. The publication of the first Egyptian Dictionary arranged on phonetic, *i.e.*, alphabetic, principles, and printed in hieroglyphic type, was a great triumph for English Egyptology and the craft of the typographer, and to Birch the compiler and Spottiswoode the printer, and Longmans the publishers, every Egyptologist owes a debt of gratitude.

Birch's opinion of his Dictionary of Hieroglyphics.

But it is quite impossible to hide the fact that the inclusion of Birch's Egyptian Dictionary in the fifth volume of the English translation was a great misfortune for the Dictionary itself and for the beginner in Egyptology for whom the work was primarily intended. There was an interval of seven years between the publication of the fourth and fifth volumes of the English translation of *Aegyptens Stelle in der Weltgeschichte*, and there seems to be no doubt that public interest in Bunsen's scheme of chronology drooped when its author died in 1860, the year which saw the appearance of the fourth volume, and was practically dead when the fifth volume was published in 1867. According to Birch, the volume fell " flat," and its editor and publishers were greatly disappointed. Whether the edition was a small one or not I have no evidence to show, but it was certainly the fact that for some reason or other copies of the volume were difficult to get in the early " seventies." It was said at the time that the publishers, being dissatisfied with the sales, had " disposed " of the sheets

Birch's Egyptian Dictionary falls " flat."

of a large number of copies. The natural result was that when people found out that the volume contained Birch's Dictionary and Grammar and Chrestomathy the copies that found their way into the market fetched relatively very high prices, or at all events prices which effectively placed the book beyond the reach of the ordinary student. When I attended Birch's Egyptian classes in 1875–76 and needed the book urgently, I was obliged to trace each page of it on a separate sheet of tracing paper, omitting the references, and when these sheets were bound I used them for some years with great benefit. Moreover, the fifth volume of the English translation of Bunsen's work formed a veritable tomb for Birch's Dictionary. The title-page of it sets forth quite clearly that the "Historical Investigation" was by Bunsen, and that it was translated from the German by Charles H. Cottrell, Esq., M.A., and that it contains "Additions by Samuel Birch, LL.D." But who could possibly imagine from this last remark that Birch's contribution was 594 pages, *i.e.*, nearly three-quarters of the whole volume, or that his contribution included an Egyptian Dictionary, the first ever published arranged on phonetic principles (!), and containing about 4,500 entries of Egyptian words, and names of gods and places, with references and translations, and an Egyptian Grammar and Chrestomathy? Or, again, take the case of the student who wants to consult these works and who, hearing that copies of them are to be seen in the British Museum Library, goes to the Reading Room to see them. He turns up the entry Birch, Samuel, LL.D., of the British Museum, in the Great Catalogue, but fails to find any mention of the Dictionary of Hieroglyphics or Grammar and Chrestomathy, because they are not mentioned in any one of the columns of names of the other books and papers which Birch wrote. All that he will find connecting Birch with an Egyptian Dictionary is the entry, "Sketch of a Hieroglyphical Dictionary, London, 1838," and unless he receives further instruction he will conclude that the "Sketch" published in 1838 is useless to him, and that Birch's Egyptian Dictionary never appeared. The same is the case with Birch's translation of the Book of the Dead, the first ever made and published, which also appeared in the fifth volume of "Egypt's Place," and his List of Hieroglyphic Characters which appeared in the first volume, first with plates of characters, and secondly with the hieroglyphic characters printed in the new type. The only mention of Birch in the Great Catalogue in connection with the Book of the Dead is contained in the title of the Trustees' publication of the texts

Bunsen's fifth volume the tomb of Birch's Dictionary of Hieroglyphics.

on the coffin of Amamu. The fault lies not with any of the generations of the learned and devoted men who have spent their lives in compiling that wonderful Great Catalogue, with its millions of entries of books in every printed language of the world, but with those who buried in their own books Birch's greatest works so effectually that they have no mention under his name in the authors' great Book of Life, the British Museum Catalogue. In his admirable Bibliography, *The Literature of Egypt and the Soudan*, 2 vols., London, 1886, 4to, Prince Ibrâhîm Hilmy rightly mentioned the translation of the Book of the Dead, and the Dictionary of Hieroglyphics and the Hieroglyphic Grammar under the entry Birch, Samuel, LL.D., etc. But even so, he refers the reader for particulars of these works to the entry Bunsen, C. C. J.

Heinrich Brugsch and his "Hieroglyphisch-Demotisches Wörterbuch."

The publication of Bunsen's *Aegyptens Stelle in der Weltgeschichte* in 1845 fired the imagination of a young German called Heinrich Brugsch,[1] who was at that time a pupil in the Real Gymnasium at Cologne, and he devoted himself ardently to the study of the Egyptian inscriptions in the demotic character. In 1849 he published the paper, *Die demotische Schrift der alten Aegypter und ihre Monumente*, in the *Zeitschrift* of the German Oriental Society (Bd. III, pp. 262–272), and in 1850 he received his Doctorate from the University of Berlin for his Thesis *De Natura et Indole Linguae Popularis Aegyptiorum*, Berlin (Dümmler, 1850, 8vo). In the same year he published *Die Inschrift von Rosette, nach ihrem Aegyptisch-demotischen Texte sprachlich und sachlich erklärt*, with an Appendix containing a series of hitherto unpublished demotic texts. In 1851 he published the hieroglyphic text of the Rosetta Stone,[2] with a Hieroglyphic-Coptic-Latin vocabulary and a list of hieroglyphic characters, and after a Mission to Egypt in 1853–54 he published his famous *Grammaire Démotique*.[3] Ten years later he published his epoch-making work on the Rhind Papyri,[4] and proved himself to be an expert in translating very difficult hieratic and demotic texts. Brugsch did not confine his studies to demotic, and between 1855 and 1865 he was engaged in drawing up a

His mission to Persia.

History of Ancient Egypt under its native kings,[1] and in publishing a series of geographical texts,[2] etc. He was attached to the Mission to Persia of the Baron Minutoli in 1850–51, and served as Prussian Vice-Consul in Cairo from 1864 to 1866, but in spite of the official duties attached to these posts he managed to find time to undertake the compilation of a Hieroglyphic Dictionary. It is more than probable that he knew that Birch was engaged on a similar task, but if he had this knowledge, it did not prevent him from making arrangements for the publication of his work. That Birch knew of these arrangements is quite certain, for his name appears in the list of subscribers issued by the publisher.

Race for priority between Brugsch and Birch.

Each scholar naturally wished to be the first in the field with his Egyptian Dictionary, so that he might claim the credit of being the first to publish a really large collection of ancient Egyptian words arranged alphabetically. In this race for priority Birch was the winner, for he dated his short Preface to the fifth volume of "Egypt's Place" on April 13th, 1867, and his whole Dictionary was then printed off. In the other case only the *first volume* of Brugsch's Hieroglyphic-Demotic Dictionary, containing the letters  , ,  ,  and  , was printed off at that time, and the publisher's advertisement on the cover is dated "Ende April 1867," though Brugsch's Preface is dated März 1867.

Brugsch's Hieroglyphic Demotic Dictionary.

The Hieroglyphic-Demotic Dictionary[3] of Brugsch is, with the exception of the Introduction, lithographed throughout. The first four volumes form the Dictionary proper and contain 1,707 pages, and the last three form the Supplement, and contain 1,418 pages. The number of words treated in the Dictionary proper is 4,637, not counting the additions in the Supplement, which were derived from newly published texts. Whilst writing out his Dictionary for the lithographer, Brugsch's object seems to have been to make the work as large as possible. He states his views on points of Egyptian Grammar at great but unequal length, and many of his paragraphs are filled with

[1] *Histoire d'Égypte sous les Rois indigènes.* Paris, 1859.

[2] *Geographische Inschriften Altägyptischer Denkmäler,* Bände I–III, Leipzig, 1857–60; *Die Geographie der Aegypter nach den Denkmälern.* Leipzig, 1860. 4to.

[3] The full title reads: *Hieroglyphisch-Demotisches Wörterbuch enthaltend in wissenschaftlicher Anordnung die Gebräuchlichsten Wörter und Gruppen der heiligen und der Volks-Sprache und Schrift der alten Aegypter nebst deren Erklärung in Französischer, Deutscher und Arabischer Sprache und Angabe ihrer Verwandschaft mit den entsprechenden Wörtern des Koptischen und der Semitische Idiome,* 7 Bände, Leipzig, 1867–1882, 4to, Vol. I, 1867; Vols. II–IV, 1868; supplement. Vol. V, 1880; Vol. VI, 1881; Vol. VII, 1882.

Digitized by Microsoft ®

extracts from Egyptian texts followed by translations and wordy comments. In some respects his work resembles an Encyclopædia of Egyptology rather than a Dictionary, and contains a great deal of information which, it seems to me, should have been given elsewhere. As no publisher could afford to defray the cost of printing the Dictionary, even on the Continent, where great scholarly works are often subsidized by the Government, it was decided to reproduce Brugsch's manuscript by lithography, which in those days was a tolerably inexpensive method of publication; and Brugsch undertook to write the transfers for the lithographer with his own hand. Thus he was given practically a free hand by his publisher, and a Dictionary containing 3,125 pages is the result. The amount of Egyptological knowledge which he displays in this truly great work is marvellous, and his familiarity with the contents of the most difficult texts, whether hieroglyphic, hieratic or demotic, is phenomenal. He was the greatest Egyptologist that Germany had produced, and his energy and zeal and devotion and power of work must ever command our warmest admiration. Brugsch, like Birch, arranged the words in his Hieroglyphic Dictionary alphabetically, and it is an interesting fact that both scholars, apparently independently, came to the conclusion that Champollion's "natural and rational" system of arrangement must be rejected. Birch, as we know from his Preface to the fifth volume of "Egypt's Place," had no high opinion of Champollion's *Dictionnaire Égyptien* as a Dictionary, for he says that it "contained only a few of the principal words." Brugsch dedicated his Dictionary to the Manes of Champollion, and in his Introduction says that Champollion's Dictionary, which was published five and twenty years ago, after its author's death, under the name of *Dictionnaire Égyptien*, could and can lay claim to-day at the very least to this name. He goes on to say that it was published without the will and intention of the immortal French scholar, and that it consists of little more than an epitome of the words and groups in his *Grammaire Égyptienne*, and that it contains mistakes of which the master, had he been alive, would never have allowed himself to be guilty.[1]

Brugsch's encyclopædic knowledge of Egyptology.

He rejects Champollion's "natural and rational" arrangement.

Brugsch's opinion of Champollion's Egyptian Dictionary.

[1] "Das unter dem Namen eines *Dictionnaire Égyptien* vor fünf und zwanzig Jahren nach dem Tode Champollion's veröffentliche Wörterbuch konnte, und kann am allerwenigsten heut zu Tage, Anspruch auf diesen Namen machen. Ohne Absicht und Willen des unsterblichen französischen Gelehrten publicir, enthält es beinahe nur einen Auszug der Wörter und Gruppen der *Grammaire Égyptienne*, dazu mit Irrthümern, deren sich niemals der lebende Meister schuldig gemacht haben würde." Einleitung, p. III.

Whilst Birch was preparing the manuscript of his Dictionary for the printer, and seeing the sheets through the press, other Egyptologists, *e.g.*, Goodwin, E. de Rougé, Chabas, Devéria, Dümichen, Lepsius and Pleyte were actively engaged in publishing and translating hieroglyphic, hieratic and demotic texts. And long before he had finished printing his Dictionary, Birch had come to the conclusion that he must prepare a second edition in which he could give all the new words and forms that appeared in the newly published texts. As he read these texts he noted every word and form that ought to be in the new edition, and he continued to write slips for many years. Those who have visited him in his room in the British Museum may remember the glass box containing slips for this new edition; this always stood in front of his inkstand and was added to daily. More than one publisher was ready to publish the new edition of his Dictionary, but his multitudinous duties and advancing years prevented him from reading all the texts that were published. And he did not see that if ever he was to publish the new edition he must at some time or other cease from the writing of slips and adding to his manuscript, and so he rejected the advice both of his publisher and his friends, and continued to write ever more and more slips.

Birch contemplates a second edition of his Dictionary of Hieroglyphics.

In 1882 Maspero began to publish the hieroglyphic inscriptions from the Pyramids of Ṣaḳḳârah in the *Recueil de Travaux*, and in them Birch found whole paragraphs of Egyptian text similar to passages in the funerary texts on the coffin of Amamu, which he was preparing for publication by the Trustees. Naturally he was anxious to include in his new edition as many as possible of the words and forms from these very ancient texts, and he set to work to read them and to extract from them additional matter for his Dictionary. He found his task more difficult than he imagined it would be, for though he doubted the accuracy of many of the readings of Maspero's text, he had no means in the shape of photographs or paper "squeezes" whereby to control them. Moreover, he was seventy years of age and his health was failing. But he struggled on gallantly and continued to write slips for the new edition of his Dictionary (which he was certain he would live to see) until death overtook him on December 26th, 1885. When his books and literary effects were being sold several boxes containing many thousands of slips were put up to be bid for as a separate lot, and a bidder bought them for ten shillings. Thus the labour of twenty years was wasted.

Maspero's edition of the Pyramid Texts.

Birch dies and leaves his manuscript for the second edition unfinished.

Pierret's "Vocabulaire Hiéroglyphique."

The difficulty of obtaining copies of Birch's Dictionary of Hieroglyphics, and the expense of both that work and Brugsch's *Wörterbuch* practically left the students of the ancient Egyptian language without a dictionary. The first scholar who made any serious attempt to help the beginner and the advanced student out of their difficulty was Paul Pierret, Conservateur adjoint des Antiquités Égyptiennes au Musée du Louvre, and he set to work to compile the handy and comparatively inexpensive *Vocabulaire Hiéroglyphique*,[1] which so many students have found to be a useful book of reference. It consists of 759 lithographed pages in which the words are arranged alphabetically, and an index to all the French words by which the hieroglyphic words are translated in the volume, which fills forty-eight double-columned pages. It contains, in a condensed form, the substance of the Dictionaries of Birch and Brugsch, and most of the 987 royal names which Lepsius published in his *Königsbuch der alten Aegypter*, Berlin, 1858, fol., and most of the 2,000 geographical names given by Brugsch in his *Dictionnaire Géographique*, Leipzig, 1877, fol.[2] In his Preface Pierret calls attention to the fact that Brugsch's Dictionary cost 600 francs, and this was without the *Supplement*, which cost about 500 francs more when it was completed in 1882. He justifies his inclusion of geographical names in his *Vocabulaire* by pointing out what every one has found who has tried to use the *Dictionnaire Géographique*, how difficult it is to find a given name in that "merveille d'érudition." He claims no special merit for his *Vocabulaire*, and says, "Mon but est de fournir aux commençants un moyen d'aborder directement les textes, et à tous un *manuel* commode et pratique." There is no doubt that he succeeded in his aim.

Pierret's Hieroglyphic Vocabulary.

Inclusion of royal and geographical names.

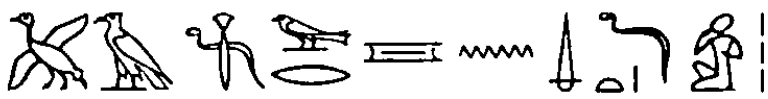

Simeone Levi's "Vocabolario Geroglifico Copto-Ebraico."

For a few years after the appearance of the last volume of Brugsch's *Wörterbuch* in 1882 no attempt was made to publish in a collected form the lexicographical material that could be collected from the editions of hitherto unpublished texts, which were appearing frequently in England, France, Germany, Russia and Italy. But meanwhile this material was being diligently

[1] *Vocabulaire Hiéroglyphique comprenant les mots de la Langue, les Noms géographiques, divins, royaux et historiques, classés alphabétiquement.* Paris, 1875. 8vo.

[2] His *Supplement* to this work, containing 1,420 pages, appeared in 1879–80.

Digitized by Microsoft®

collected by one scholar at least who was dissatisfied with the existing Egyptian Dictionaries, and was determined to publish a new one. This was Simeone Levi, an Italian Egyptologist, who was well known for the very useful list of hieratic characters which he published[1] in 1880. Under the title of *Pa Uatch-ur en Metchut*  , i.e., *The Great Sea of Words*, he began to publish a *Coptic-Hebrew Hieroglyphic Vocabulary* with translations of the hieroglyphic words in Italian and numerous quotations of Coptic and Hebrew words which he held to be cognate to the ancient Egyptian words.[2]

Levi's Egyptian-Italian Dictionary.

The *Vocabolario* proper consists of six parts folio, which were published in 1887–88 and contain 1,705 lithographed double-columned pages; the Supplement consists of two parts, and contains 696 pages; Part I was published in 1889, and Part II in 1894. In a very closely written Preface, which fills 30 pages, Signor Levi discusses the grammar and the structure of the ancient Egyptian language, which he treats as though the speech that is revealed to us by the hieroglyphic, hieratic and demotic texts belonged to the Semitic family of languages. It was a mistake on his part to do this, for he assumed to be a fact that which has never been proved; to him Egyptian, Coptic and Hebrew are substantially forms of one and the same language. He adopted an unusual arrangement of the alphabet, placing h  and ḥ  after tch  , and t  , or  , and ṭ  after sh  , and kh (χ)  and  at the end of the alphabet, etc. Thus the arrangement and the values of the letters of his alphabet are as follows :—

Levi holds Egyptian to be a Semitic language.

 a = א.  à = א or אָ.  ā = אָ. ī = אִ. i = אִ.  u = וּ, אֻ or .  o = א or אֹ or אָ.  ua = הוּא.  ur הור.

His Egyptian-Hebrew alphabet.

 b = ב,   p = פ. f = פ.  ,  , ,  m = מ.  ,  ,  ,  n = נ.  r = ר. r, l = ר, ל.  , s = ס, שׂ. ,  sh = שׁ. , ,  t = ת, ס. d = ד.  z = צ, ז. h = ה. ḥ = ה. ,  q = ק.  , k = כ.  g = ג.  ,  , χ = ח, כ.

This system seems to represent an attempt to show that the ancient Egyptians adopted the Hebrew alphabet. By some curious oversight Levi failed to find an equivalent for the Hebrew letter ע.

Hagemans "Lexique Français-Hiéroglyphique."

The list of published Egyptian Dictionaries ends with the *Lexique Français-Hiéroglyphique* that was compiled by M. G. Hagemans and was published at Brussels in 1896. It is an octavo volume of 923 lithographed, double-columned pages, which contain a French-Egyptian Dictionary and Supplement, a hieroglyphic, hieratic-demotic alphabet, and a list of determinatives.

Hagemans French-Egyptian Lexicon.

The Present Egyptian Dictionary.

It will probably be admitted by all that the compiler of an Egyptian Hieroglyphic Dictionary should know at first hand every collection of Egyptian monuments and papyri in the world, that he should have visited every great Museum on the Continent and in Egypt, England and America, and copied, or collated with printed editions, every hieroglyphic, hieratic and demotic text of importance, that he should know well the histories of Egypt written by classical writers, and the works of the Arab geographers, and Coptic in all its dialects, and that he should have had at his disposal unlimited time, in short that he should have been able to devote his whole life to the making of his Egyptian Dictionary. That he should also have one or more assistants to help him in his laborious task also goes without saying. I am conscious that, unfortunately, I possess none of the qualifications necessary for such a great work except in a very limited degree. Nevertheless I have written this Dictionary and how I came to do so the following paragraphs will show.

Qualifications necessary for writing an Egyptian Dictionary.

Between the years 1880 and 1883 the Natural History Collections were removed from the British Museum, Bloomsbury, to the new buildings which were specially constructed to receive them at South Kensington. Thereupon several of the rooms of the First and Second Northern Galleries, and the long room that ran parallel to the fourth room of the First Northern Gallery and had contained the studies and workrooms of the Natural History Staff, were allotted to the Department of Oriental Antiquities. When Dr. Birch, Keeper of the Department, had removed the Collections of Egyptian and Semitic Antiquities into them, and rearranged the Egyptian Collections, he took

Rearrangement of the Egyptian Collections in the British Museum.

Digitized by Microsoft®

in hand a task which he had contemplated for many years, namely, the compilation of a detailed description of the Egyptian hieroglyphic and hieratic funerary papyri. The English translation of the Saite Recension of the Book of the Dead according to the Turin Papyrus,[1] which he published in 1867,[2] had aroused universal interest, and he was urged to supplement it with a version of the older Theban Recension translated from the rich collection of XVIIIth dynasty papyri in the British Museum. The smaller papyri had been cut up into sections and mounted under sheets of glass, and were at that time arranged in drawers in the Table-Cases in the public rooms. The longer papyri, *i.e.*, those which measured from 5 to 30 feet in length, had been mounted in black glazed wooden frames and hung upon the walls of the North-West Staircase. But as in this position it was well-nigh impossible to consult them, and as it was feared that they might suffer injury through damp, they were taken down and, where possible, were cut up into sections, mounted under sheets of glass and stored with the shorter papyri. During the general rearrangement of the papyri which followed these alterations Birch seized the opportunity of re-examining and describing with minute care the papyri which Professor Naville had selected as authorities for the text of his edition of the Theban Recension of the Book of the Dead, and he directed me to assist him in this work. He was chiefly anxious to collect variant readings, and unusual forms of words, and new words, and to make lists of the papyri in which particular Chapters appeared. The work was long and difficult, chiefly because we possessed no concordance of the words of the Theban Recensions, and therefore could not easily identify the Chapters in which they occurred in mutilated papyri. So long as we were dealing with papyri containing the Saite Recension we found Lieblein's little "Index"[3] very useful, but for identifying Chapters and passages in the Theban Recension it afforded no help. Having grouped the funerary papyri chronologically, *i.e.*, according to dynasties, Birch began to write his descriptions of the papyri, and he directed me to make a concordance to them, and intended to incorporate the slips that I wrote with those which he was heaping up as material for the new edition of his "Dictionary

The Theban Recension of the Book of the Dead.

of Hieroglyphics," which he fully believed he would one day publish (see p. xlii).

When I had been engaged on this work, officially and unofficially, for nearly two years, Birch died, but I continued to write slips for the concordance to the Theban Recension, and began to collect words from the Bremner (Rhind) Papyrus (Brit. Mus. No. 10,188), and other funerary works. It was now quite certain that the new edition of Birch's "Dictionary of Hieroglyphics" could never appear, and my friends advised me to go on collecting Egyptian words with the view of publishing a "Vocabulary" on much the same lines as Pierret's "Vocabulaire." By that time the slips which I had written amounted to many thousands, and I soon found that the work of arranging them and of incorporating the new ones consumed a vast amount of time. It was impossible to continue the work on the scale on which I had begun, and I foresaw that the task of making a concordance to Egyptian literature could not be carried out by any man who could not devote his whole time to the work.

I abandon the idea of making a concordance to the funerary papyri.

Between 1888 and 1892 the British Museum acquired the Papyrus of Ani, the Papyrus of Nu, the Papyrus of Nekht and other remarkable Codices of the Theban Recension of the Book of the Dead. The first edition (500 copies) of the Facsimile of the Papyrus of Ani was sold in less than two years, and it became a part of my official work to prepare a second and more correct edition of the Facsimile and to write the volume of English text which was published with it in 1894. I made a Vocabulary to the Egyptian text, but want of space prevented its inclusion in the volume of English translations. I then began to make a Vocabulary to the Papyrus of Nu, and in working through it I was so much impressed with the importance of this Codex that I decided to publish an edition of the Theban Recension, and to make it and the Papyrus of Nebseni the principal authorities for the Egyptian text. I have described the Papyrus of Nu at length elsewhere,[1] and it is only necessary to say here that it contains 131 Chapters, *i.e.*, more than any other copy[2] of the Book of the Dead now known. The whole papyrus is carefully written, Nu himself probably having been the scribe. The father of Nu was called Amen-ḥetep and his mother Sen-seneb, and it is probable that she was no other than the lady Senseneb, the wife of Nebseni the scribe, whose copy of the Book

My edition of the Theban Recension of the Book of the Dead.

of the Dead in the British Museum (No. 9900) has so much in common with that of Nu. Taking 115 Chapters from the Papyrus of Nu, 25 from the Papyrus of Nebseni, 27 from the Papyrus of Ani, and some half-dozen hymns, etc., from the Papyri of Hunefer, Mut-hetep and Nekht, I prepared an edition of the Egyptian texts and translated them. When I ventured to suggest to Messrs. Kegan Paul, who undertook to publish the edition, that text and translation should be accompanied by a Concordance they demurred, saying that no one would buy the Concordance, or Vocabulary, for no one wanted such a thing. Finally they decided to print 750 copies of the Egyptian text and Vocabulary, and 1,000 copies of the Translation, thinking there would be a larger demand for it than for the first two volumes of the work. Two years later they wrote to me saying that the whole edition of the Egyptian text and Vocabulary was sold, and that as about 230 copies of the Translation were unsold they had decided to sell them as a "remainder," and they did so. Thus it was proved that there was a considerable demand for an Egyptian Vocabulary to the Theban Recension of the Book of the Dead, and that there were students who would not buy the Translation unless they could have the Vocabulary with it. In printing the Vocabulary I adopted a plan hitherto untried. I placed the transliteration of the Egyptian words in the first instead of in the second column as was usual, for it seemed to me that it would enable the beginner to find the word he wanted more easily and quickly. This plan has been much approved of in England, and as it has been adopted in an "Aegyptisches Glossar" published in Berlin in 1904 it has evidently seemed useful to the practical Teutonic mind.

My Vocabulary of the Theban Recension.

The success of the Vocabulary to the Book of the Dead and the encouragement of many friends emboldened me to write an Egyptian Hieroglyphic Dictionary,[1] and with this object in view I began to collect words from Egyptian literature generally. I first laid under contribution the Dictionaries of Birch, Brugsch and Pierret and verified, as far as possible, all doubtful readings. From the Vocabularies published with editions of special texts I obtained much material, and from my own reading of texts, both published and unpublished, I obtained a

The collection of material for this Dictionary.

[1] As Brugsch died in 1894, all hope of a new edition of his *Wörterbuch* had to be abandoned. His private copy of this work was purchased by the British Museum, and is now in the Library of the Department of Egyptian and Assyrian Antiquities. It is interleaved and in several volumes, and the extensive notes and additions in his own handwriting suggest that he contemplated the issue of a new edition.

Digitized by Microsoft ®

great deal more. The result of all this work was that I filled many boxes and drawers with slips on each of which a word was written, with its certain or problematical meaning, and a reference to the text or monument where it was to be found. In 1908 I had written over three hundred thousand slips, and in spite of the constant help of my wife in arranging them and in making incorporations, I realised that the publication of such a mass of material was impossible. No one man could write the fair copy of it for press, and no publisher could afford to undertake its publication. I therefore set to work to revise the slips, and to destroy all that had redundant references, and references to words the meanings of which were commonly accepted. In this revision I got rid of more than one-half of the slips, but even then the compilation was far too large, and further revision was necessary. I then cut out all the numerous quotations from texts, and nearly all comments, abbreviated the references to published works, and, at the risk of making a somewhat bald Egyptian Vocabulary, eschewed, except in very rare cases, any attempt to discuss theoretical renderings of words. This second revision was completed in 1913, and the slips which I proposed to print numbered nearly 28,500.

Revisions of the slips.

The question of publication then arose. During the early stages of the writing of this Dictionary an understanding existed between Mr. Blackett, Manager of Messrs. Kegan, Paul, Trench, Trübner & Co., and myself that his firm would endeavour to include it among their publications, but by the time the manuscript was ready for the printer, he had left their service, and they were not in a position to fulfil his wish. I talked the matter over with Mr. Horace Hart, Printer to the Oxford University Press, and showed him the manuscript of the Dictionary, and, having made a rough calculation of the probable cost of printing it, he came to the conclusion that no publisher ought to undertake the work without a subsidy. He thought that the cost of production might be lowered by printing it in Vienna, and spoke highly of the Austrian firm of Messrs. Adolf Holzhausen, who had already printed several books of mine, and with whose excellent typography I was well acquainted. Further enquiry made by me among printers and publishers showed the correctness of Mr. Hart's opinion, and I accepted it as final. I decided that it was unwise to attempt to reproduce my manuscript by lithography, because works of reference printed by lithography are often very unsatisfactory and difficult

Difficulty of finding a publisher.

Printing in Vienna recommended.

Digitized by Microsoft®

to use, and I lacked the skill of Brugsch in writing the transfers.

A friend offers to defray the cost of printing the Dictionary.

Soon after my conversation with Mr. Hart I had the opportunity of placing my difficulty before a friend—an English gentleman who has been all his life intensely interested in the ancient languages of the Near East, and has proved himself to be a generous patron and supporter of English archæological enterprise in Egypt and Western Asia for many years past. This gentleman, who persists in his determination to remain anonymous, gave me a sympathetic hearing, and a few days later wrote and offered to defray the cost of printing the Dictionary in Vienna. With heartfelt gratitude I accepted this munificent offer, and made preparations to take the manuscript, which filled seven large tray-boxes, each about two feet three inches in length, to Vienna in May, 1914. The completing of a piece of work on which I was then engaged made it necessary for me to postpone my journey from the spring till the early autumn, when I hoped to conclude my negotiations with Messrs. Holzhausen speedily, and to begin to print before the end of the year. The delay was providential for the Dictionary, for the Great War broke out early in August, and my manuscript was safe in England; had it been in Vienna it would have been impossible to regain possession of it for a very considerable time, and even if I had eventually succeeded in recovering it, its publication must have been delayed for some years. As things were, I was able, with the consent of my friend and benefactor, to open negotiations with Messrs. Harrison and Sons for the printing of the book, and very soon after their completion the printing began.

The printing of the Dictionary begun in England.

Contents of this Dictionary.

The present Dictionary of Egyptian Hieroglyphs contains nearly twenty-three thousand forms of Egyptian words collected from texts of all periods between the time of the IIIrd Dynasty and the Roman Period. Strictly speaking, the words belonging to each of the great periods of Egyptian literature should have been printed in separate sections, but the time for making such a series of Egyptian Dictionaries has not yet arrived, it seems to me. Birch excluded from his Dictionary the names of deities and the names of places, and printed lists of them as Appendices to his Dictionary of words. Pierret included in his "Vocabulaire" the names of deities, kings and places, and made it to contain practically all the essential parts of the Hieroglyphic Dictionaries of Birch and Brugsch, Champollion's "Panthéon

Digitized by Microsoft ®

Égyptien,"[1] Lepsius' "Book of Kings,"[2] and Brugsch's "Geographical Dictionary."[3] And Brugsch, expecting the student to refer at first hand to these works, devoted all the space in his *Wörterbuch* to registering and explaining Egyptian words. Though there is much to be said in favour of following this plan strictly, I have nevertheless included in the Dictionary of Egyptian words the names of all the gods and goddesses, and other mythological beings that I have been able to collect, and thus the total number of entries in this section of the book amounts to 23,889.

Names of gods and goddesses included.

Pierret's instinct, which told him that a "Vocabulaire Hiéroglyphique" that was intended to help beginners in the study of Egyptology, ought to contain the names of kings, was undoubtedly correct, but it seems to me that he made a mistake in scattering them throughout his work. As the "Königsbuch" of Lepsius, and the "Livre des Rois" of Brugsch and Bouriant[4] are out of print and scarce, and the edition of my own "Book of Kings"[5] is rapidly becoming exhausted, I have printed a full list of the names of Egyptian kings as Part II of this work. This was necessary, for of *Das Handbuch der Aegyptischen Königsnamen* by Pieper and Burchardt only one part has appeared (Berlin, 1912, 8vo), and few students can ever hope to possess the splendid but expensive *Le Livre des Rois de l'Égypte*, which Gauthier has published in the *Mémoires* of the French Archæological Institute of Cairo, in five parts, folio (Cairo, 1902–16). My List contains 439 entries, which give the names of all the known kings, from Menà, the first king of all Egypt, to the Roman Emperor Decius. It includes all their principal Ka and Nebti names, and their names and titles as the Horus of Gold, the King of the South and North, and the Son of Rā. It illustrates at a glance the development of the use of these names and titles, which in many cases resemble the "strong names" that were adopted by the kings

Names of kings included.

Digitized by Microsoft ®

of Dahomey. Some of the abnormally long strings of bombastic epithets which the later Pharaohs loved to see prefixed to their names as Kings of the South and North I have omitted, for they only contain quite ordinary titles.

Geographical names included.

The importance to the beginner of having a list of geographical names available for handy reference is so obvious that no apology is needed for devoting a section of this work to a register of the names of countries, districts, localities, cities, towns, etc., in Egypt, the Egyptian Sûdân and Western Asia. Brugsch's *Dictionnaire Géographique*, Leipzig, 1887–80, and the three volumes of his *Geographische Inschriften Altägyptischer Denkmäler*, Leipzig, 1857–60, contain a vast amount of information, but the facts needed re-stating and supplementing in the light of the studies of modern Egyptologists. In drawing up the Geographical List, which forms Part III of this Dictionary, and contains nearly 3,500 entries, I have derived much help from Müller's *Asien und Europa nach Altägyptischen Denkmälern*, Leipzig, 1893, and Burchardt's *Die Altkanaanäischen Fremdworte und Eigennamen im Aegyptischen*, Leipzig, 1909–10. In the first of these the writer has treated the geography of Egypt and her colonies historically and chronologically, and has grouped, in a clear and systematic manner, all the facts that were available at the time when he wrote the book. In the second, the author collected a mass of material of the utmost importance for the student of Egyptian Geography and Philology. His work is of peculiar value because he possessed a good working knowledge of Hebrew and other Semitic dialects, and was able to use it authoritatively in dealing with Egyptian forms of Semitic words and place-names. Every Egyptologist must lament the untimely death of this sound scholar. I have also obtained much help in identifying the original names of Syrian and Palestinian places mentioned in Egyptian texts from Knudtzon's *Die El-Amarna Tafeln*, Leipzig, 1907, and Winckler's complete edition of the texts from the Tall al-'Amârnah Tablets (*Der Thontafelfund von El Amarna*, Berlin, 1889). Wherever possible I have added the cuneiform originals in the Egyptian Geographical Lists from the Tall al-'Amârnah Tablets and from the historical inscriptions of the kings of the later Assyrian Empires which flourished between 1350 and 620 B.C. The exact positions of scores of places must always remain unknown because their conquerors, whether Egyptian or Assyrian, often destroyed cities and towns utterly, and in a generation or two their sites would be forgotten.

Geography of Egypt, Syria and Palestine.

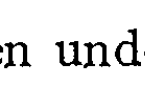

The Tall al-'Amârnah Tablets.

The English Index.

The last section of this Dictionary contains a series of Indexes. The First Index contains a complete alphabetical list of all the English words, with references, which are used to translate the Egyptian words, and it forms a kind of English-Egyptian Dictionary. I have found the French Index in Pierret's *Vocabulaire Hiéroglyphique* very useful in reading Egyptian texts, and I hope that mine, which is much larger and fuller, and contains over sixty thousand references, will be acceptable to the beginner.

The Index of Kings' names.

The Second Index ought to assist in the identification of royal names when they occur in mutilated texts. In it many of the prenomens, which begin with Rā or some other god's name, are given under two forms; thus  , the prenomen of Seti I, will be found both under Rā-men-Maāt and Men-Maāt-Rā. The Hebrew and Greek forms of Egyptian royal names, the identifications of which are tolerably certain, are also given.

The Geographical Index.

The Third Index contains a list of geographical names, with references, under the ordinary forms in which they are found in English books. These are followed by lists of the forms in which they occur in Coptic Literature, in the works of Greek writers, in the Hebrew Bible, in Semitic texts, and in the cuneiform inscriptions, both Assyrian and Persian.

Coptic Index.

The Fourth Index contains a list of all the Coptic words, with references, that occur in the Dictionary, and the Fifth Index consists of lists of all the non-Egyptian words, Hebrew, Syriac, Arabic, Ethiopic, Amharic and Greek, that are quoted or referred to in it.

Index of Semitic words.

The arrangement of the words.

The system on which the words are arranged in the Dictionary is alphabetical, like that followed by Birch in his "Dictionary of Hieroglyphics," and by Brugsch in his "Wörterbuch," and by the makers of Vocabularies to editions of special texts, *e.g.*, by Stern[1] and Erman[2] in Germany, Lieblein[3] in Norway, Piehl[4] in Sweden, Schiaparelli[5] in Italy, Maspero[6] and Moret[7] in

France, by Griffith,[1] and by Griffith and Thompson[2] in their Demotic Glossaries, and by myself in England.[3] In the case of several words belonging to the late period here and there inconsistency will be found, but this is due chiefly to the fact that many signs which had syllabic values under the Middle and New Empires were used as mere letters in the late texts. And Egyptian scribes were themselves inconsistent in their spellings.

Transliteration.

Throughout this book the transliteration of the Egyptian word is placed first in the entry, according to the plan followed in my Vocabulary to the Theban Recension of the Book of the Dead. Then follows the Egyptian word in hieroglyphs, frequently with a reference to the text where it is found, and then the meaning. Now, the exact meaning of many words is unknown, and can only be guessed at by the context. In some cases the context makes the meaning of an unknown word comparatively certain, but in others, especially where no probable Coptic equivalent is forthcoming, it does not, and then any meaning suggested is little else than the result of guesswork. In many cases, then, the English words that are set down as translations of rare and difficult Egyptian words must only be regarded as suggestions as to the probable meanings. This is especially the case with certain words in the Pyramid Texts. The meaning of some of them is tolerably clear from the determinatives, but there are a considerable number of words in these difficult documents for which no one has so far proposed meanings that may be considered correct. The spells and magical formulæ which abound in these Texts are not only difficult to translate because of the words of unknown meaning in them, but also because it is not always clear where one word ends and the next begins. Even Maspero found himself unable to translate whole sentences and passages in them, and as none of the translations of them promised by German scholars has yet appeared, it seems as though the difficulties which they belittled in describing Maspero's edition of the Pyramid Texts have vanquished them.

The meanings of many words unknown.

Order of the letters.

The order of the letters in Birch's "Dictionary of Hieroglyphics" is as follows:— 

[1] *Catalogue of the Demotic Papyri in the John Rylands Library,* Vol. III. Manchester, 1909.

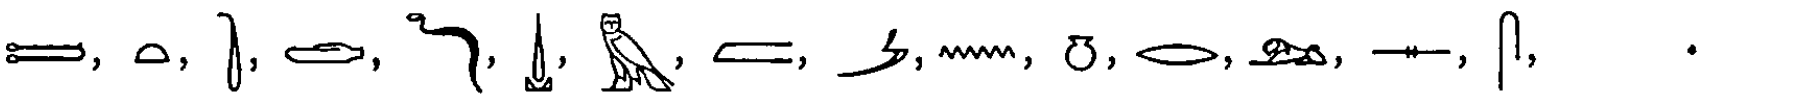

[2] *The Demotic Magical Papyrus of London and Leiden,* Vol. III. London, 1909.

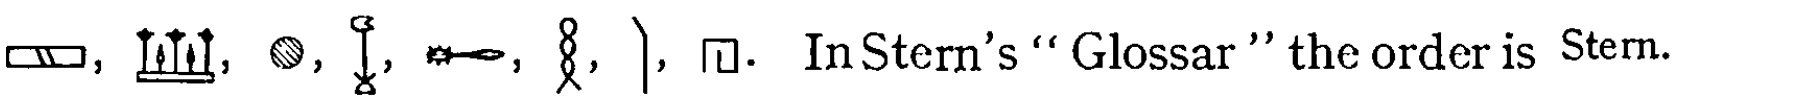

[3] *Vocabulary to the Theban Recension of the Book of the Dead.* London, 1898.

In other words, he tried to make their order approximate to that of the letters of the English Alphabet. Birch.

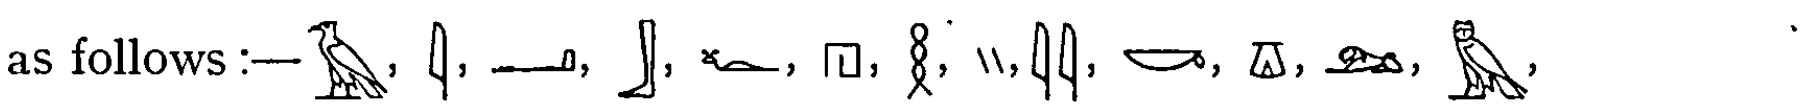

In E. de Rougé's Egyptian Alphabet (*Chrestomathie Égyptienne*, Part I, Paris, 1867) the order of the letters is as follows :— E. de Rougé.

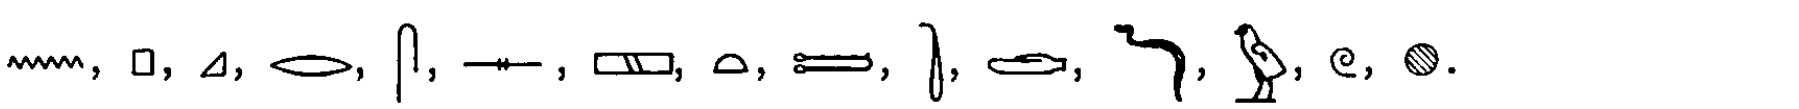

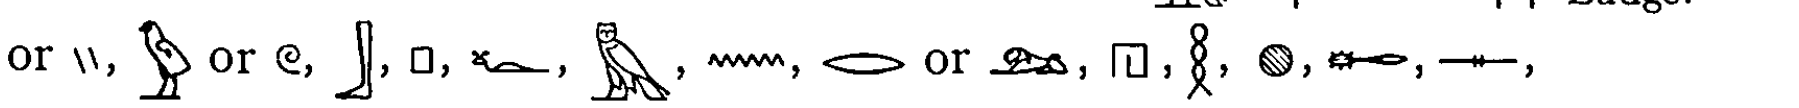

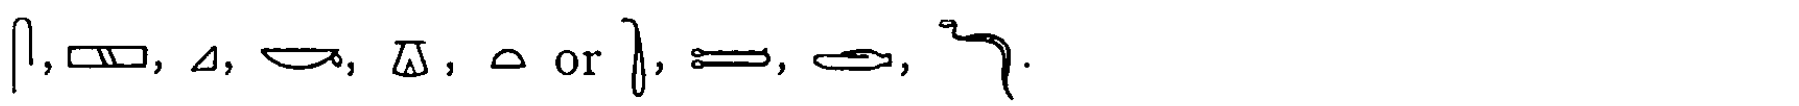

. In Stern's "Glossar" the order is as follows :— Stern.

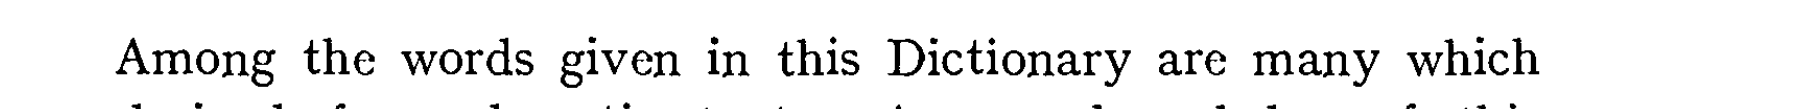

The order followed in this Dictionary is: Budge.

.

Among the words given in this Dictionary are many which are derived from demotic texts. As my knowledge of this branch of Egyptology is rudimentary I have relied for the correctness of their transcription into hieroglyphs chiefly upon the works of that erratic genius, E. Revillout, and Professor F. Ll. Griffith. These scholars have shown that Demotologists are able to transcribe demotic texts into hieroglyphs, and Birch's view that they were unable to do this is no longer tenable. About the correctness of the meanings of many demotic words given by them there can be no doubt, for the equivalents of a great number of them, and their counterparts in form, are to be found even in the existing Coptic "Scalae" and in the printed Coptic Vocabularies and Dictionaries of Peyron, Tattam and Parthey. Demotic words:

The references to original documents and to published editions of them in this Dictionary are, in respect of number, unsatisfactory. They represent a compromise, and will suffer the fate of all compromises, that is to say, they will satisfy nobody. In the great collection of slips which I made first of all there were to some words as many as sixty references, and the slips that contained only from six to twelve references were very few. To print all these was manifestly impossible, for the references would have occupied far more space than the Egyptian words and their meanings. It seemed at first that each word ought to be followed by a reference, but even so the References to publications.

Digitized by Microsoft ®

references required as much space as the Egyptian words, and I decided that many references to the older printed literature must be cut out, and only a limited number to recent publications admitted. Further, it was clear that the names of authors and their papers printed in the *Recueil de Travaux*, the *Transactions* and *Proceedings* of the Society of Biblical Archæology, the *Archæologia* of the Society of Antiquaries of London, the *Aegyptische Zeitschrift*, and other scientific journals of the kind, would have to be omitted, and the name of the journal quoted in an abbreviated form. A list of the abbreviations of the titles of all books actually quoted will be found on pp. lxxv–lxxxvii. This is followed by a list of all the principal books that have been used or consulted in the writing of this Dictionary, so that the beginner may know to what books to turn in the prosecution of his studies.

Coptic forms of Egyptian words.

Following the meaning of the word and at the end of the entry is often given the equivalent of an Egyptian word in the latest stage of the language, *i.e.*, Coptic. In selecting these Coptic equivalents I have not copied them straight out of a Coptic Dictionary, but have satisfied myself that they bear the meaning which the Egyptian words have in passages in the Coptic versions of the Bible, and in Coptic patristic literature generally. Had the great *Corpus* of Coptic words upon which Mr. W. E. Crum has been at work for so many years been available[1] the number of Coptic equivalents quoted in this Dictionary would probably have been quadrupled. The Hebrew, Syriac, Arabic and other Semitic words quoted in the entries stand in a different relationship to the Egyptian, for they merely represent borrowings of words, usually by the Egyptians from the Semites, whilst the true Coptic words are native Egyptian. They seem to me to stand in quite a different category from the pronouns which were borrowed at a very early period by the Egyptians from the people whom, for want of a better name, we may call "Proto-Semites." And the greater number of them were certainly introduced into Egyptian texts after the Egyptians founded Colonies in Syria and Palestine by scribes who either knew no Egyptian words that were exactly suitable for their purpose, or who wished to ornament their compositions by the use of Semitic words or to show their erudition.

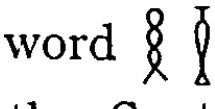

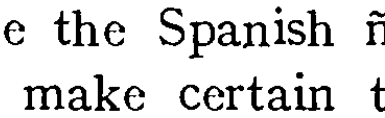

Mr. Crum's Coptic Dictionary.

Borrowed Semitic words.

[1] When the Great War broke out in 1914 Mr. Crum was in Vienna, and had his enormous mass of material with him. He succeeded in leaving the city, but his manuscripts remained there for a considerable time afterwards, and his work has been hampered in consequence, and the publication of his Coptic Dictionary delayed for five years.

Digitized by Microsoft ®

Difficulties of transliteration.

In the transliterations of the Egyptian words in this Dictionary, I have followed the order of the letters of the Egyptian words, but I cannot think that these transliterations always represent the true pronunciation of the words. Thus in the word *āāam*  , a plant, it is impossible to think that the Egyptians took the trouble to pronounce two long vowels having exactly the same sound and to give  its value, always supposing it had a phonetic value in this word. The analogies in Coptic suggest that we should read the word simply *ām*, nevertheless the scribe wrote  . Again in the word *Nenui*[*t*] or *Nui*[*t*]  , the primeval watery mass, we have *n* 〰 + *en* + *n* 〰 + *nu* , *i.e.*, four *n* sounds; that any Egyptian ever took the trouble to pronounce all of them in this word is inconceivable. It is possible that the scribe wished the reader to understand that one *n* had to be pronounced like the Spanish ñ or the Amharic , and wrote *n* four times to make certain that he did so. In many transliterations of Egyptian words I have added the letter *e*, not because I think it represents the vowel which the Egyptians used in these places, but merely to make the words pronounceable and therefore easy to remember. Thus the word  , or  , is transliterated *ḥes* by me, but the Coptic equivalent ϩωc shows that the vowel sound between the two consonants was not an *e*, but something like an *o*. On the other hand in , "to submerge," the Coptic equivalent ϩⲁⲥⲉ suggests that in this word at least the vowel sound was that of some kind of *a*. And in *netchem*  , or , "sweet," "pleasant," the Coptic equivalent ⲛⲟⲩⲧⲉ suggests the first vowel sound in the word was *u* or *o* and the second that of some kind of *e* or *a*. Without vowels of some kind how can the name of the god 〰  , or 〰 , or , be pronounced? In transliterating 〰 I have written *en* or *ne*, and there is good authority for doing so, namely the most ancient Coptic papyrus Codex of the Book of Deuteronomy and the Acts of the Apostles.[1] Thus in ϩⲛ ⲡⲏⲉⲓ ⲛ̄ⲧⲉⲕⲉⲛ̄ⲧϩⲉⲉϩⲁⲗ (Deut. 13, 10) the line over the ⲛ̄ and the ⲉⲛ̄ proves that the reader had to

Addition of the letter *e*.

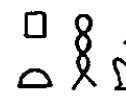

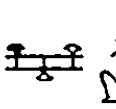

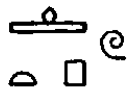

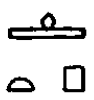

Evidence of Coptic texts.

Digitized by Microsoft ®

supply some vowel when pronouncing these letters, either an *a* or an *e*, probably the latter. And this was the case with several other letters besides ⲛ and ⲙ̀ⲙ, for we have ⲁⲧⲉⲧⲛ̄ⲟⲩⲱⲥⲩⲃ̄ (Deut. 1, 41), ⲙ̀ⲙⲡ̄ⲣ̄ (*ibid.* 42), ⲧⲉⲧⲛ̄ⲟⲩⲱⲥⲩⲣ̄ⲭ (*ibid.*), ⲁⲩⲱ ⲛⲧ̄ ⲧⲃ̄ⲃⲟϥ (*ibid.* 4, 15), ⲛ̄ⲛⲉⲕⲣ̄ⲙ̀ⲙⲛ̄ⲧ̄ⲣⲉ (*ibid.* 20), ⲙ̀ⲙⲛ̄ ⲛⲉⲧⲛ̄ ⲉ̀ⲗ̄ⲗⲟ (*ibid.* 23), ⲛⲛⲟⲩⲧⲉϥⲉⲧ ⲟⲛⲉ̀ (*ibid.* 26), ⲕⲁⲧⲁⲧⲉⲉ̀ⲓⲛ ⲧⲏⲣ̄ⲥ̄ (*ibid.* 5, 33), ⲉ ⲧⲟⲟⲧⲕ̄ (*ibid.*), ⲱⲁⲛⲧⲣ̄ⲭⲟⲧⲟⲩ ⲉ ⲃⲟⲗ ⲁⲩⲱ ⲛⲉⲩⲣ̄ⲣⲱⲟⲩ (*ibid.* 8, 24), ⲛⲧ̄ ⲧⲙ̀ⲙ ⲣ̄ ⲛⲱⲃⲱⲩ (*ibid.* 25, 19), ⲉ̀ⲛ̄ ⲟⲩⲱⲣⲭ̄ (Acts 5, 23), ⲛⲛⲁⲩ ⲛ̄ ⲭⲛ̄ⲥⲓⲧⲉ̀ (Acts 10, 3), etc. From these examples we see that lines were written over the letters ⲃ̄, ⲗ, ⲙ̀ⲙ, ⲛ, ⲛ̄, ⲣ, ⲥ, ⲧ, ⲕ, ⲩ, ⲭ, ⲱⲥ and ⲭ, and that in certain positions in words a helping vowel was necessary for their pronunciation.

Separate vowels in words.

The whole question of the use of the separate vowels which we find in Egyptian words is one of considerable difficulty, and it seems to me quite clear from the statements that are made on the subject by Egyptologists that no one has yet succeeded in solving the problem. It is quite obvious that the scribes systematically wrote certain words without vowels and expected the reader to supply them, *e.g.*, the name of the god  Ptḥ. Now, it is impossible to pronounce this name without adding one vowel at least, but there is nothing in Egyptian to show what that vowel must be or where it is to be placed. In the case of Ptḥ, the Greeks, who spelt the name Φθά, or Φθᾶ, supply the vowel, and suggest that the Egyptians pronounced it something like "Ptaḥ." Or, take the name of the god Horus, which the Egyptians wrote Ḥer  ,  ,  ,  and  , without adding any vowel. The transcriptions of the name in Hebrew (הור), Coptic (ϩⲱⲣ) and Greek (Ὧρος) prove that the missing vowel is ō, but the Egyptian forms of the name give no indication of this fact. In the Pyramid Texts we find the form  (M. 454) which was held by one Egyptologist to prove that the god's name terminated in *u*; but, according to M. Naville's view, which is probably correct, the  is really the vowel that is wanting in the name, which we ought to read "Ḥur," or "Hor," as in Hebrew, Coptic and Greek. This same scholar thinks that another example of the usē of the  in this way is found in  , or  , variants of  ,  , , , and . As the Coptic form of the word is ϩⲱⲧⲛ̄, the ancient Egyptian form of the word clearly included

Egyptian abbreviations of words and names.

Vowels placed at the ends of words.

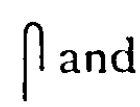

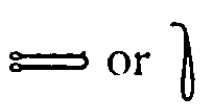

Digitized by Microsoft ®

the vowel ō, and this is proved by the  or ⟨ in the first two forms of  quoted above. It has seemed to me for several years past that the vowel signs which we find in many Egyptian words were intended not to be read necessarily as parts of the words, but only to indicate or limit their signification. But the subject is too large to discuss in an Introduction to a Dictionary, and demands a book to itself. Meanwhile, I understand that M. Naville is preparing a volume on the whole question, and as there is every reason to believe that he will present in a new light many important facts bearing upon Egyptian phonetics, its appearance is eagerly awaited.

Vowels as indications of the meanings of words or verbal forms.

The system of transliteration which I have used in this Dictionary is a modification of that which was employed by Birch and some of the older Egyptologists, and by Brugsch until the last years of his life. The following is the transliteration of the letters of the Egyptian Alphabet which Brugsch printed in the first volume of his *Wörterbuch* (1867) :—

The Egyptian Alphabet in 1867.

	a		b		h		k
	ȧ		p		ḥ		ḳ
	ā		f		χ		t
	i		m		s		t
	ī		n		š		ṯ
	u		r		š		ṯ́
	ū, ua (w)		l		k		ṯ́

The Egyptian Alphabet in 1880.

In 1880, the following modification of this Alphabet appeared in the fifth volume of his *Wörterbuch* (Folge und Umschreibung der alphabetischen Zeichen) :—

a. Vowels and half-vowels :—

 a.  ȧ (א). ā (ע). i. ī, y (י). u, ō.

 u, w (ו).

c.[1] Consonants :—

	b, v (ב)		s
	b (ב)		š, χ (sχ)
	p		š (ש)
	f		k, q (ק)
	m		k, g (ג and ע)
	n		k (כ)
	r		t (ט)
	l		θ (ת, ס)
	h		ṯ (ת, ת)
	ḥ (ח)		t′ (ט, ץ)
	χ (ח, כ)		t′(a) (ץ)

The Egyptian Alphabet in 1891.

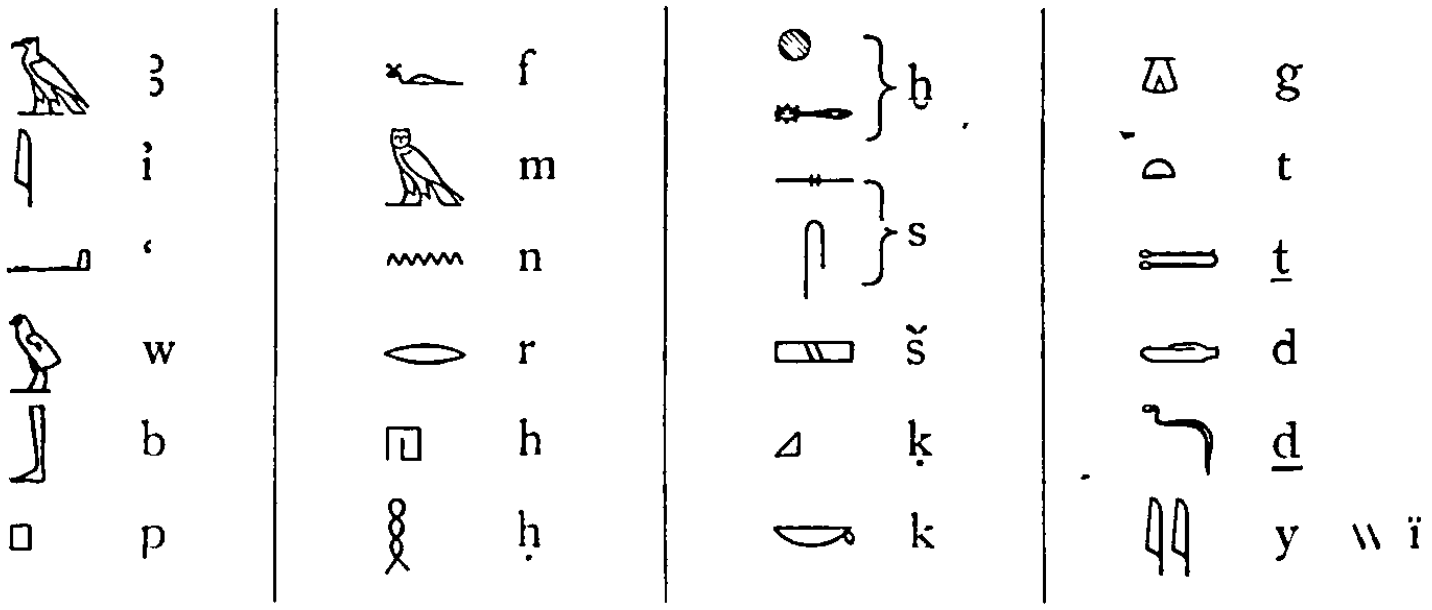

In 1891 (*Die Aegyptologie*, p. 94) he published a further modification of the Egyptian Alphabet which reads as follows :—

1.		ʾ (ȧ)	9. 	f	17.	s
2.		ȝ (a)	10. 	m	18. 	š
3.		ʾʾ (i)	11.	n	19. 	g
4.		ʾʾ (i)	12. 	r, l (r)	20. 	k
5.		ʿ (ā)	13. [	rw] (l)	21. 	ḳ (q)
6.		w (u)	14.	h	22. 	t
7.		b	15. 	ḥ	23. 	t (θ)
8.		p	16. 	ḫ (χ)	24. 	d (ṭ)
					25. 	d (ṭ′)

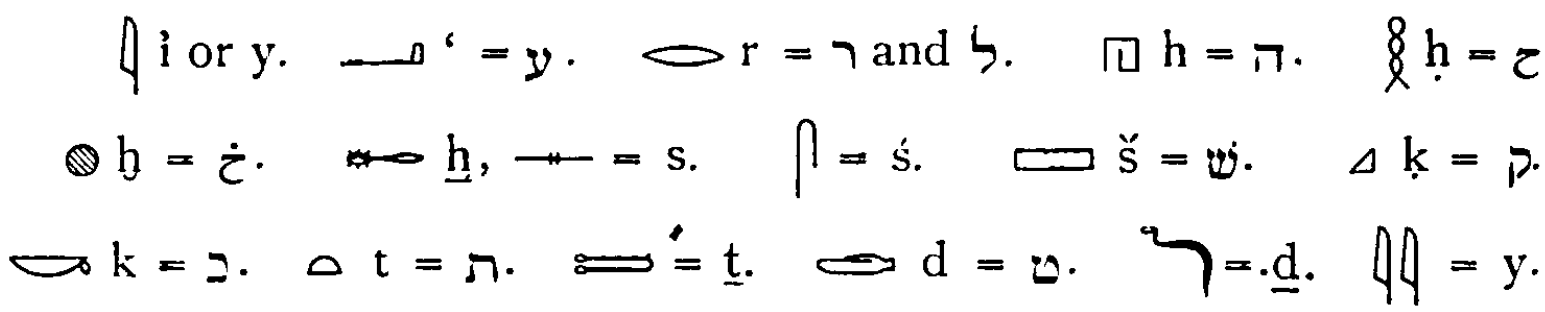

[1] b contains a list of double vowels and half-vowels.

Digitized by Microsoft ®

In 1894 Dr. Erman proposed some modifications of this system of transliterating the Egyptian Alphabet, and printed the following (*Egyptian Grammar*, London, 1894, p. 6) :— The Egyptian Alphabet in 1894.

In 1911 he made the following changes and addition (*Aegyptische Grammatik*, Berlin, 1911, p. 20) :— The Egyptian Alphabet in 1911.

From these we see that Dr. Erman introduces the sign  as a letter of the Egyptian Alphabet, and distinguishes between the two sibilants  and  ; that he gives *y* as an alternative value to , and regards \\ as a "little yodh," and that he retains ȝ, *i* and ʿ as the transliterations of  ,  and  respectively. It is also to be noted that his system includes the letters ḫ, ḥ, ś, ṯ, and ḏ, making with ȝ and *i* seven new characters which must be specially cut for the compositor's use. There are many objections that might be urged against this system of transliteration, but the innovations in it are not worth discussion. It is sufficient to say that when the actual mistakes in the older system that was used by Birch, Lepsius, Brugsch and others are eliminated it remains, in my opinion, the best that has yet been proposed. The modifications which I have made in it for the purposes of this book are not in any way intended to be improvements or even corrections; they were made solely with the view of simplifying the transliteration for the use of the beginner, and of reducing the labour of the compositor. I have tried to get rid of as many letters with diacritical marks as possible, because they often The simplified transliteration used in this book.

Digitized by Microsoft ®

break off in the process of printing; but I have retained á for  , ā for , ḥ for and ṭ for ; three of these, ā, ḥ and ṭ, are familiar to every student of Oriental languages. I have rejected ʾ and *i* and ‘; and letters with lines or a semi-circle under them, *i.e.*, ẖ, ḫ, ṯ, ḏ, and s with an accent (ś), I have eschewed entirely for the reasons given in the following paragraphs.

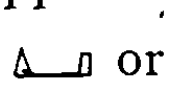

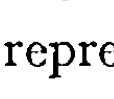

Maspero on Egyptian phonetics.

Maspero with infinite pains collected in his *Introduction à l'Étude de la Phonétique Égyptienne*, Paris, 1917, a number of examples illustrating the various vowel sounds which the Egyptians themselves gave to the signs  , and . And from his conclusions it is clear that even though we transliterate  by A, the A will not represent all the various modified sounds which the human mouth can give to that letter ;[1] and this is also the case with  and . According to him the primitive phonetic value of the sign in Pyramid times was “ un A moyen ” like the French A in *patte, cage*, that is to say, an Ă, or an open Á which borders on É as in the popular pronunciation *Montp*É*nasse* for *Montp*Á*rnasse* ;  A is À *grave* bordering on Ô, as in the popular Parisian pronunciations gÒ*r* for *g*A*re*, or in the English A*ll*, *w*O*s* for *w*A*s* ; is À guttural which recalls the sound of ʿ = ع, but does not correspond to it exactly and turns sometimes to the Á *aigu*, and sometimes to the À *grave*. In fact, we see that in archaic Egyptian “ les phonèmes variés de la langue postérieure ne s'étaient pas produits encore, et qu'il n'y avait sous chacun d'eux, ainsi que sous chacun des signes reconnus pour consonnes par tous les savants  , , , , , etc., qu'un phonème unique, ou, si l'on veut, les groupes de nuances vocaliques que nous avons l'habitude de désigner par un signe unique.” Accepting these conclusions heartily it has seemed to me quite unnecessary to use any other signs to represent  , and than a, á and ā respectively.

 , and

[1] “ Si donc nous disons que le signe A anglais figure une voyelle, il n'y a pas de raison pour que les signes  , , ne figurent pas des voyelles. Bien entendu, je n'ai pas la prétention d'affirmer que, si par exemple sonnait A, il n'y avait sous ce signe qu'un seul des A possibles. Comme chaque modification de forme dans la bouche humaine produit une voyelle ou une nuance de voyelle différente, le nombre des voyelles et de leurs nuances est très considérable ; aussi les signes que nous appelons *signes-voyelles* communément A, E, I, etc., représentent en réalité des groupes de nuances vocaliques différant très légèrement l'une de l'autre et l'on considérera les signes qui représentent chacun d'eux, , , , en Égyptien comme couvrant chacun de ces groupes ” (p. 119).

Digitized by Microsoft ®

The sign  is transliterated *u* throughout; it is no doubt equivalent both to  and , and I think it is a mistake to transliterate it always by *w*. The correct transliteration of  , or  , or  , or  is a matter of difficulty. That  was sounded in some way different from  is clear, otherwise it would appear in words more frequently. It seems possible that the sign  or added to the  was intended to show that the  was to be pronounced in one of the many ways in which *m* is sounded in African languages, but what that way was is not evident. When  occurs at the end of an Egyptian transcription of the name of a locality in Palestine or Syria it may represent *mā*. In this book I have often transcribed  by *m'*. And as regards  , when the Egyptian wrote the *n* was probably pronounced like the Spanish *ñ* or the Amharic ኝ *gn*.

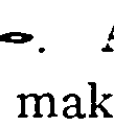

The sign is transliterated *u* throughout. The sign  .

, or , or , or The sign .

 and .

The signs  and are transcribed throughout by *kh* and *kha* respectively. According to some authorities is represented in Coptic by ϩ and by ϧ, but the Copts did not observe this distinction carefully, for we find in Coptic texts ϩⲏⲃⲓ and ϧⲏⲃⲓ, ϩⲉⲗⲉ̄ and ϧⲉⲗⲉ̄, ϩⲣⲉ and ϧⲣⲉ, ϩⲱⲧϧ and ϧⲱⲧϧ, etc. The absoluteness of the statement that can become in Coptic ϩ and ϧ but never ⳋ, but that can become ϩ or ⳋ, or ϧ or ⳋ, has been disproved by Maspero,[1] and nothing more need be said about it here. In this Dictionary the words beginning with and those beginning with are separated into two distinct groups for the convenience of the beginner, but it has been thought unnecessary to use any specially distinctive signs for and . As he will always have the Egyptian text before him, he can make no mistake. The χ is, of course, dropped.

 and ϧ. and ϧ.

In 1892, Professor Hommel pointed out in the *Zeitschrift für Aegyptische Sprache* (Bd. 30, s. 9 ff) that the Egyptians used two sibilants which were represented by the signs  and , and the fact is beyond dispute, as all will admit. But the texts prove conclusively that they ceased to distinguish between them in writing, except in the case of a few words at an early period, and that they used and indiscriminately when they wished to express the letter s. There is no doubt that must sometimes have had a somewhat different sound from for we find the

The sibilants and .

Digitized by Microsoft ®

word for "jackal" written or *sab* or *sb*, and the Hebrew word for the animal is *zĕ́ĕbh* זְאֵב. But we also find a form beginning with the , thus , and, as several variants of this form begin also with , the form that begins with is not a very sure ground for the statement that = ז. The *z* sound must have been very rare in Egypt, for most of the words under ⲍ in the Coptic Dictionaries are of Greek origin; ⲍⲱⲛⲧ for ⲥⲱⲛⲧ (*see* Parthey's *Vocabularium*) seems to have been the result of careless pronunciation. When the Egyptians merged the sound of in that of is not known, but the merging must have happened long before the Christian Era began, for the Copts represent both signs by c. And the Egyptian transcriptions of Canaanite geographical names prove that both and represent ד and שׂ. In their transliterations of the signs and the German Egyptologists distinguish by *s* and by *ś*, but in this Dictionary I have followed the example of Birch and Brugsch and Maspero, and regarded them as having practically one and the same sound. Nevertheless, remembering the large number of words that begin with the signs and , and with the view of simplifying the task of the searcher who may use this Dictionary, I have printed all the words beginning with in one section, and all those beginning with in the section following.

 rarely = ז.

 and =ד and שׂ.

By transliterating  by *q*, a letter with a diacritical point (ḳ) has been got rid of and, though the transliterating of by g does not seem quite satisfactory, I have followed the example of the older Egyptologists in this particular.[1] The signs  and are both transliterated by *t*, and by using *th* for the Greek θ and a letter with a line under it (*t̲*) are eliminated. In the case of I have retained the transliteration *ṯ* and have not adopted *d* by which it is now sometimes transliterated. Maspero has shown that in Semitic geographical names in the XVIIIth dynasty often represents the Hebrew ד, *e.g.*, in , Heb. קָדֵשׁ, and , יַרְדֵּן, but other names show that ד is represented in Egyptian by , *t*, *e.g.*, , Heb. דַּמֶּשֶׂק. At a later period is transliterated by ט, *e.g.*,

 =q.

 = g.

 and =t.

 = th.

[1] In one Coptic word, ⲕⲁⲩ, "reed," the ⲕ represents , for the hieroglyphic form is ; see Erman, *Aegyptisches Glossar*, p. 139, and Maspero, *Introduction*, p. 39.

Digitized by Microsoft ®

in the name  , the Aramean transcription of which is פטיסורי, and in the name  , Abydos, the Aramean transcription of which is אבוט. In the Greek period  represents the Greek T, as in Κλεοπάτρα  , and Δ, as in Δίος  . In the Coptic period, when the hieroglyphs were no longer in use, the scribes wrote all the names which in the old language had a  or a with *θ*. Finally, as Maspero admits[1] that the sound of was not exactly that of the Greek Δ or the Arabic ذ, I have thought it best to retain *ṯ* as the transliteration of . It is possible that the sound of the Greek Δ did exist at one time in Egyptian, but when the Copts formulated their alphabet it had disappeared from the mouths of ordinary folk..

 = d (ד) or ṭ (ט).

There remains to mention now only the transliteration of  which in some recent works appears as *t'* or d with a line under it, *d̲*. In the transcription of Semitic geographical names represents both צ and ז, *e.g.*, , צִידוֹן and , גּוֹר. But there is abundant proof that it may be correctly transliterated by both *ts* and *tch*, and I have adopted the latter, which is pronounced like the *ch* in "child," or the *c* in "cicerone."

 =ts and tch.

Egyptian an African Language Fundamentally.

The alleged relationship of Egyptian to the Semitic languages.

During the years which I spent in collecting the materials for this Dictionary I looked eagerly in the texts for any evidence that would throw light on the relationship of the ancient Egyptian language to the Semitic languages and to the languages of North Eastern Africa. Though the subject is one of considerable importance philologically, it has never been, in my opinion, properly discussed, because the Semitic scholars who have written about it have lacked the Egyptological knowledge necessary for arriving at a decision, and the Egyptologists, with the exception of the lamented Burchardt, have had no adequate knowledge of Semitic languages and literature. Benfey came to the conclusion that the ancient Egyptian language had close affinity with the Semitic family of languages, but then he also said that the Semites belonged to a great group of peoples which not only included the

Benfey's opinion.

Digitized by Microsoft ®

Egyptians, but all the peoples of Africa,[1] which is obviously absurd. Although his excursions into Coptic had disastrous results so far as his reputation was concerned, his view that there was a close affinity between the Egyptian and Semitic languages found acceptance with many scholars, among them being E. de Rougé, Ebers and Brugsch, all of whom were Egyptologists. Birch's view was that the "greater portion of the words [in the ancient Egyptian language] are an old form of the Coptic; others, no longer found in that tongue, appear (to be) of Semitic origin, and have been gradually introduced into the language from the Aramaïc and other sources. A few words are Indo-Germanic."[2] Brugsch stated categorically that the oldest form of the ancient Egyptian language is rooted in Semitic, and he prophesied that one day philological science would be astonished at the closeness of the relationship which existed between Egyptian and the Semitic languages. He was convinced that they had a mother in common, and that their original home was to be sought for on the banks of the Tigris and Euphrates.[3] Brugsch held these views practically to the end of his life, for in his *Die Aegyptologie*, Leipzig, 1891, p. 91, he quotes from his *Wörterbuch* the words which he wrote in the preface in 1867. Stern, the eminent Coptic scholar, also declared that the Egyptian had an affinity with the Semitic languages, which shows itself in the pronominal formations and in the roots which are common to all, but thought that it separated itself from its Asiatic sisters at a very early period and developed along lines of its own.[4]

Brugsch on the Semitic origin of the Egyptian language.

Stern's opinion.

These views, which the older Egyptologists expressed in general terms, were crystallized by Erman in a paper which he contributed to the *Zeitschrift der Deutschen Morgenländischen*

[1] Benfey, *Über das Verhältniss der Aegyptischen Sprache zum Semitischen Sprachstamme.* Leipzig, 1844.

[2] Bunsen, *Egypt's Place*, Vol. V, p. 618.

[3] Es steht mir nämlich fest, dass die altägyptische Sprache, d. h. die älteste Gestaltung derselben, im Semitischen wurzelt. . . . Im voraus kann ich es weissagen, dass die Sprachforschung eines Tages erstaunt sein wird über das enge Band der Verwandtschaft, welches die ägyptische Sprache mit ihren semitischen Schwestern zusammenknüpft, und über die mir jetzt schon feststehende Thatsache, dass alle eine gemeinsame Mutter haben, deren Ursitze an den Ufern des Euphrat und Tigris zu suchen ist." *Wörterbuch*, Bd. I, p. ix.

[4] Es besteht eine alte verwandtschaft zwischen der ägyptischen, welche dem hamitischen stamme angehört, und den semitischen sprachen, wie sich unverkennbar noch in der pronominalbildung und in manchen gemeinsamen wurzeln zeigt; doch scheint sich das ägyptische von den asiatischen schwestern früh getrennt zu haben und seinen eigenen weg gegangen zu sein. *Koptische Grammatik*, p. 4.

Digitized by Microsoft ®

Gesellschaft in 1892.[1] In this he pointed out in a systematic manner the details of Egyptian Grammar that have their counterparts in the Semitic languages, and printed a List of the words that were common to the Egyptian and Semitic languages. Most of these words had been remarked upon by Brugsch in his *Wörterbuch*, but Erman's List heightens their cumulative effect, and at the first sight of it many investigators would be inclined to say without any hesitation, "Egyptian is a Semitic language." A very able comparative philologist of the Semitic Languages, Carl Brockelmann, impressed by the remarks of Brugsch quoted above and by this List, says that Egyptian must certainly be included among the Semitic Languages, and that the more the oldest form of it, such as that made known by the Pyramid Texts, is investigated, the more convincingly apparent becomes its similarity to the Semitic Languages. Like Brugsch, he thinks that it separated itself from its sister tongues thousands of years ago, and went its own way. According to him the Egyptian language developed more quickly than the languages of the other Semites, which was due partly to the mixing of the people caused by the invasion of the Nile Valley by Semites, and the rapidity with which the Egyptian civilization reached its zenith, much in the same way as English has gone far away from the other Germanic languages.[2] Wright thought that the connection between the Semitic and the Egyptian languages was closer than that which can be said to exist between the Semitic and the Indo-European. But he called attention to the fact that the majority of Egyptian roots are monosyllabic in form, and that they do not exhibit Semitic triliterality. He was prepared to admit that the "not a few structural affinities" might perhaps be thought sufficient to justify those linguists who hold that Egyptian is a relic of the earliest age of Semitism, *i.e.*, of Semitic

Recent views based on Brugsch's opinion.

Monosyllabic character of Egyptian roots.

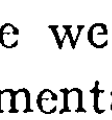

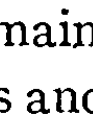

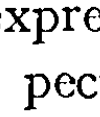

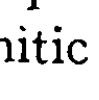

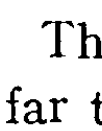

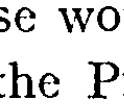

[1] *Das Verhältniss des Aegyptischen zu den semitischen Sprachen* (Bd. XLVI), p. 93 ff.

[2] Es scheint sehr vieles dafür zu sprechen, dass die Aegypter eigentlich in diesen Kreis hineinzubeziehen sind. Je mehr die Forschung den ältesten Formenbau des Aegyptischen, wie er in den Pyramidentexten vorliegt, erschliesst, desto überraschender tritt Aehnlichkeit mit dem Semitischen zu Tage. . . . Durch die Vermischung der einwandernden Semiten mit den älteren, anderssprachigen Bewohnern des Niltals und durch die frühe Blüte ihrer Kultur sei das Aegyptische viel schneller und durchgreifender fortentwickelt, als die Sprachen der anderen Semiten, ähnlich wie das Englische sich unter denselben Umständen so weit von den anderen germanischen Sprachen entfernt hat. *Grundriss der vergleichenden Grammatik der semitischen Sprachen*. Berlin, 1908, p. 3.

speech as it was before it passed into the peculiar form in which we may be said to know it historically.[1]

Egyptian fundamentally an African language.

Now no one who has worked at Egyptian can possibly doubt that there are many Semitic words in the language, or that many of the pronouns, some of the numbers, and some of its grammatical forms resemble those found in the Semitic languages. But even admitting all the similarities that Erman has claimed, it is still impossible to me to believe that Egyptian is a Semitic language fundamentally. There is, it is true, much in the Pyramid Texts that recalls points and details of Semitic Grammar, but after deducting all the triliteral roots, there still remains a very large number of words that are not Semitic, and were never invented by a Semitic people. These words are monosyllabic, and were invented by one of the oldest African (or Hamitic, if that word be preferred) peoples in the Valley of the Nile of whose written language we have any remains. These are words used to express fundamental relationships and feelings, and beliefs which are peculiarly African and are foreign in every particular to Semitic peoples. The primitive home of the people who invented these words lay far to the south of Egypt, and all that we know of the Predynastic Egyptians suggests that it was in the neighbourhood of the Great Lakes, probably to the east of them. The whole length of the Valley of the Nile lay then, as now, open to peoples who dwelt to the west and east of it, and there must always have been a mingling of immigrants with its aboriginal inhabitants. These last borrowed many words from the newcomers, especially from the "proto-Semitic" peoples from the country now called Arabia, and from the dwellers in the lands between the Nile and the Red Sea and Indian Ocean, but they continued to use their native words to express their own primitive ideas, especially in respect of religious beliefs and ceremonies. Words like *tef*  "father," *sa*  "son," *sen*  "brother," *ȧf*  "flesh," *qes*  "bone," *tep*  "head," *ȧb*  "heart," *ā*  "hand," *tches*  "self," *ka*  "double," *ba*  "soul," *ȧakh*  "spirit," and scores of others that are used from the earliest to the latest times, are African and have nothing to do with the Semitic languages. When they had invented or borrowed the art of writing, they were quick to perceive the advantage of adding to their pictures signs that would help the eye of the

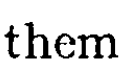

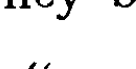

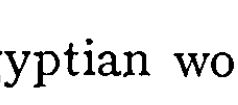

Perpetual immigration into the Nile Valley.

Borrowings from proto-Semitic.

Addition of conventional signs.

reader, and convey to his mind an exact conception of what the writer intended to express. The names of the cardinal numbers show that the people who invented the words quoted above counted by fives, for they have words for "one"  , "two"  , "three"  , "four"  , and "five"  , and their next number is "ten"  . When they came in contact with the Semites they borrowed from them the numbers "six"  , Heb. שֵׁשׁ, "seven"  , Heb. שֶׁבַע, "eight"  , Heb. שְׁמֹנָה, and "nine"  Heb. תֵּשַׁע. In a similar manner they borrowed *t*  as a sign of the feminine, and several of the pronouns, and at a much later period many of the Semitic words that were current at the time in Syria and Palestine. And it has always seemed to me that some of the aboriginal words of the primitive Egyptians found their way into neighbouring countries, where they still live. Thus the common Egyptian word *khefti*  , "enemy," which has its equivalent in the Coptic *shaft* ⲥϧⲁϥⲧ, is also found in Amharic under the form *shaftâ* ሸፍታ:. The Egyptian word *ṭeng*  "pygmy," seems to be preserved in the Amharic *denk* ድንክ: The Egyptian word *ṭuat*  , "morning," seems to survive in the Amharic *ṭuwat* ጡት:; and with the Egyptian *Sa* (?)  or  "man," "person," may be compared the Amharic *saw* ሰው: "man or woman," "person."

Borrowing numbers.

Borrowing of the pronouns and the sign of the feminine.

Survivals in Amharic.

As none of the literature of the peoples who lived on each side of the Valley of the Nile has been preserved, we have no means of finding out how much they borrowed linguistically from the Egyptians or the Egyptians from them, but I believe the Egyptians were as much indebted to them as to the Semites. I do not for one moment suggest that such literature as the modern inhabitants of the Valley of the Nile and the neighbouring countries possess, whether it be those on the east or those on the west of the Nile, can be utilized for explaining ancient Egyptian texts, but the comparatively small amount of attention which I have been able to devote to the grammars and vocabularies of some of the languages now spoken in the Eastern Sûdân has convinced me that they contain much that is useful for the study of the language of the hieroglyphs. The ancient Egyptians were Africans, and they spoke an African language, and the modern peoples of the Eastern Sûdân are Africans, and they speak African languages, and there is in consequence much in modern native

Value of modern Sûdânî dialects for comparative purposes.

Sûdânî literature which will help the student of ancient Egyptian in his work. From the books of Tutschek,[1] Krapf,[2] Mitterutzner,[3] and from the recently published works of Captain Owen[4] and Westermann,[5] a student with the necessary leisure can collect a large number of facts of importance for the comparative study of Nilotic languages both ancient and modern.

The Introduction, Indexes, Semitic Alphabets, etc.

The Introduction.

In the introductory section of this book I have given a list of the commonest Egyptian signs, with their values as phonetics and determinatives, arranged practically according to the Lists of Egyptian Hieroglyphic Signs published by the eminent printing firms of Theinhardt in Berlin,[6] Holzhausen in Vienna,[7] and Harrison & Sons in London.[8] Certainly none of these lists is absolutely correct since the classification of several of the signs is the result of guesswork, for the simple reason that Egyptologists do not know what objects certain signs are intended to represent. The only native Egyptian List of Hieroglyphs known was published by Griffith, *Two Hieroglyphic Papyri from Tanis*, London, 1889, 4to, but this does not help us much in the identification of the hieroglyphs. The first printed List of Hieroglyphs was published by Champollion in his *Grammaire Égyptienne*, Paris, 1836, and contains 260 hieroglyphs. In 1848 Birch published a fuller List with detailed descriptions (see above p. xxxiii) in the first volume of the German and English editions of Bunsen's "Aegyptens Stelle." This he revised and enlarged, and republished in 1867, in the second edition of the first volume of the English edition, pp. 505–559. It contained 890 hieroglyphs and 201 determinatives were grouped separately. In 1851 E. de Rougé issued a List of hieroglyphs in his *Catalogue des signes hiéroglyphiques de l'Imprimerie Nationale*, Paris, 1851, and he reprinted it with explanations and descriptions in the first part

Lists of Hieroglyphic signs by Champollion, Birch, E. de Rougé and Brugsch.

[7] *Hieroglyphen.* Vienna (no date). This List contains all the unusual types which were specially cut to print Maspero's edition of the Pyramid Texts.

[8] *List of Egyptian Hieroglyphics.* London, 1892.

Digitized by Microsoft ®

of his *Chrestomathie Égyptienne*, Paris, 1867. This contained about 340 hieroglyphs. A much fuller and more accurate List was published by Brugsch, *Index des Hiéroglyphes Phonétiques y compris des valeurs de l'Écriture Secrète*, Leipzig, 1872, and it contained 600 signs and their phonetic values, accompanied by references to pages of his *Wörterbuch*, and 147 determinatives. After the Lists given by Rossi in his Coptic Hieroglyphic Grammar[1] and by von Lemm[2] in his Egyptian Reading Book, no further attempt was made to discuss hieroglyphs generally until Griffith described 104 Egyptian characters in *Beni Hasan III*, London, 1896. Two years later he published *A Collection of Hieroglyphs*, London, 1898, which contained descriptions and identifications of 192 hieroglyphs illustrated by really good coloured pictures of the objects which they represented, copied chiefly from coffins and tombs of the XIIth dynasty. The most recently published List of Hieroglyphs is that given by Erman in the third edition of his *Aegyptische Grammatik*, Berlin, 1911. It contains about 660 hieroglyphs, not reckoning variants, selected from Theinhardt's List. In the List of Hieroglyphs given in the present work I have followed their order in the List of Messrs. Harrison & Sons, but have been obliged to alter the numbers of the characters. I have given all the ordinary phonetic values which the signs have when forming parts of words generally, but have made no attempt to give the word-values when they are used as ideographs. The values which many of the signs had when used in the so-called "enigmatic writing," and in the inscriptions of the Ptolemaïc Period are not given. Want of space made it impossible to include in this Introduction a list of the hieratic forms of hieroglyphs; for these the beginner is referred to Pleyte's *Catalogue Raisonné de Types Égyptiens Hiératiques de la Fonderie de N. Tetterode*, Leyden, 1865 (which contains 388 signs), and the works of Simeone Levi[3] and G. Möller.[4]

The selected Lists of Rossi, von Lemm, Griffith and Erman.

Lists of hieratic signs.

I have also given in the Introduction reproductions by photography of the Egyptian Alphabet as formulated by Young,

[1] *Grammatica Copto-Geroglifica con un' appendice dei principali segni sillabici e del loro significato.* Rome-Turin-Florence, 1877. It contains 386 phonetic signs and 124 determinatives.

[2] *Aegyptische Lesestücke.*

[3] *Raccolta dei Segni Ieratici Egizi nelle diverse epoche con i corrispondenti Geroglifici ed i loro differenti valori fonetici*, Turin, 1880 (contains 675 signs).

[4] *Hieratische Paläographie. Die Aegyptische Buchschrift in ihrer Entwickelung von der Fünften Dynastie bis zur Römischen Kaiserzeit.* Part I, Leipzig, 1909 (contains 719 signs); Part II, Leipzig, 1909 (contains 713 signs); Part III, Leipzig, 1912 (contains 713 signs).

Digitized by Microsoft ®

Reproductions of pages of some early Egyptological works.

Champollion, Lepsius, and Tattam, and reproductions of pages of Birch's *Sketch of a Hieroglyphical Dictionary*, Young's *Rudiments of an Egyptian Dictionary in the ancient Enchorial Character*, Champollion's *Dictionnaire Égyptien*, and Birch's *Dictionary of Hieroglyphics*. These works are not to be found in every public, still less private, library, and I believe that many a reader will examine and study them, if only from the point of view of the bibliographer.

Semitic alphabets.

The indexes to the Coptic and to the non-Egyptian words and geographical names which are at the end of the book will show that a considerable number of Coptic, Hebrew, Syriac, Arabic, Ethiopic, Amharic, Assyrian and Persian words and names are quoted in this Dictionary. The beginner who wishes to examine these words will need to learn the alphabets of the principal Semitic languages, and as I know of no Egyptological work in which they are to be found, I have included them in this Introduction, and they follow the List of Egyptian Hieroglyphs.

Apologia and Thanks.

The mistakes of scribes and transcribers, their errors and omissions.

In the preparation of the manuscript of this Dictionary for the printer I have not spared labour, or trouble, or time or attention, and I have made every effort during the proof reading to reduce misprints to a minimum. I have copied too many texts in the course of my life not to know how easy it is for the attention to be distracted, and the eye to be deceived, and the hand to write something which it ought not to write when doing work of this kind. The professional copyists of the Book of the Dead, and the monastic scribes who laboriously transcribed Coptic, Syriac, Arabic and Ethiopic texts in Egypt, Ethiopia and Syria, made many mistakes, mis-spelt the words of the archetypes in their copies, omitted whole lines, and made nonsense of many passages by omitting parts of words and mixing together the remaining parts. It seems to me obvious from these facts that every one who undertakes a long and very tedious work like the making of an Egyptian Dictionary, must be guilty of the perpetration of mistakes, blunders, and errors in his copying, however careful he may be. In my work there will be found inconsistencies, misunderstandings, and misprints, and probably downright misstatements, and as Maspero said in his edition of the Pyramid Texts, "je le regrette sans m'en étonner. . . . C'est une infirmité de la nature humaine dont on finit par prendre son parti, comme de bien d'autres." Notwithstanding such defects I hope and believe that this Dictionary will be useful to the

Digitized by Microsoft®

beginner, and will save him time and trouble and give him help, and if my hope and belief be realized, the purpose of my friend who made the printing of the book possible will be effected, and my own time and labour will not have been wasted. Many, many years must pass before the perfect Egyptian Hieroglyphic Dictionary can, or will, be written, and meanwhile the present work may serve as a stop-gap.

Thanks to those who have made the publication of this Dictionary possible.

It is now my pleasant duty to put on record my thanks and gratitude to those who have enabled me to produce this book. First and foremost they are due to the gentleman, who having discussed with me my plan for the proposed Dictionary and suggested certain modifications of it and additions to it, decided to defray the entire cost of its production. In spite of my entreaties he persists in remaining anonymous, and wishes to be known only as an English gentleman who is interested in everything that concerns the history, religion, language and literature of ancient Egypt, and in the language and literature of the Copts, that is to say, of the Egyptians who embraced Christianity. He is also deeply interested in the exploration of Western Asia, and has liberally supported all the endeavours made by the English to excavate the sites of the ancient cities mentioned in the Bible. Owing to the great advance in the price of materials, and the various rises in wages in the printing trades that have taken place during the War, twice or thrice I was on the verge of being obliged to stop the printing of this book, but my friend decided that the work should go on, and that the original plan as approved by him should be neither altered nor curtailed, and he furnished the means for continuing the work. What this means will be evident from the fact that since we began to print in July, 1916, the cost per sheet has increased by not less than 125 per cent.! In addition to this generous act I am indebted to my anonymous friend for ready help and sympathy during the last forty years.

Great rise in wages and cost of production of this Dictionary.

I owe my wife many thanks for constant help in the sorting and incorporation of slips, and for assistance in the reading of proofs. She has also read for and with me the proofs and revises of every sheet of the book, and its completion is due largely to her help and encouragement.

Mr. Edgar Harrison.

To Mr. Edgar Harrison, partner in the firm of Harrison & Sons, I am indebted in another way. From start to finish he has taken the deepest interest in the printing of the Dictionary, and has done everything he could, both officially

Digitized by Microsoft ®

and privately, to forward my work. During the War, when the resources of the Firm were strained to their utmost to carry out the urgent work which was thrust upon them by the Government, and when every available hand was pressed into this service, he somehow managed to keep going the composition of this book, and found means of machining each sheet when ready for press. Besides this, he had many hundreds of new characters cut, and spared no trouble in reproducing my manuscript, and whenever necessary he cast great quantities of new type to enable the composing to continue, and so avoided delay during the distribution of the type of worked-off sheets. At the present time his fount of Egyptian type is the largest and most comprehensive and complete in the world. At my request he has prepared a list of his Egyptian Hieroglyphic types which will be found at the end of the volume. On the Continent great printing firms like Harrison & Sons, who enlarge and complete their founts of Oriental types, receive subsidies from Governments, or from Academies, but in England no subsidies or contributions are given to printers, and the satisfaction which they feel when they have done a public-spirited act of this kind is their sole reward. That Messrs. Longman cast at their own expense the fount of solid Egyptian type that was used for printing Birch's "List of Hieroglyphics," and his "Dictionary of Hieroglyphics," and that Messrs. Harrisons have cut, at their own expense, the very extensive and complete fount of linear hieroglyphic types used in the printing of the present work, will ever redound to the credit of the great company of English publishers and master-printers. Dedication: the coloured border was drawn by Mr. Alfred Caton.

Messrs. Harrisons' fount of Egyptian type.

Finally, I mention with gratitude the help which I have received from Mr. A. E. Fish, the able compositor in the employ of Messrs. Harrisons who set the type of this Dictionary. He has shown great zeal and interest in the work, and his skill and great experience have triumphed over many difficulties, and made the proof reading easier. He is a worthy successor of Mr. Mabey, Messrs. Harrisons' great Oriental Compositor, who set the type for George Smith's monumental work *The History of Assurbanipal*, London, 1871, and of Mr. Fisher who set the type for my text volume of the *Book of the Dead*, London, 1894, published by the Trustees of the British Museum.

Messrs. Harrisons' Oriental compositor.
